H. Styan, Jarkko Isotalo, 2011-08-24 In teaching linear statistical models to first year graduate students or to final year undergraduate students there is no way to proceed smoothly without matrices and related concepts of linear algebra their use is really essential Our experience is that making some particular matrix tricks very familiar to students can substantially increase their insight into linear statistical models and also multivariate statistical analysis In matrix algebra there are handy sometimes even very simple tricks which simplify and clarify the treatment of a problem both for the student and for the professor Of course the concept of a trick is not uniquely defined by a trick we simply mean here a useful important handy result In this book we collect together our Top Twenty favourite matrix tricks for linear statistical models
