

BREAKTHROUGHS IN BIOTECHNOLOGY

- Computers aided scientists in **biotechnology**, the managing of biological systems to improve human life.
- Researchers have used this to develop new medicines, animal growth hormones, genetically engineered plants, & industrial chemicals.
- The first break in biotechnology occurred in 1953, when American molecular biologist **James Watson** and his British colleague, **Francis Crick**, deciphered the structure of DNA, the genetic material in cells that determines all forms of life.
- With the development of supercomputers, it was possible to map out the human genome, recording the **DNA** sequence in our species.
 - The Human Genome Project began at the National Institutes of Health in 1990.
 - All their data was placed on the Internet free of charge with the hope that no single nation or private laboratory will control the outcome or limit the use of genome findings.

GEN Guide to Biotechnology Companies ,1998 The Biotech Business Handbook Michael G. Pappas,2012-12-06

One comment often repeated to me by coworkers in the biotechnology industry deals with their frustration at not understanding how their particular roles fit into their company's overall scheme for developing manufacturing and marketing biomedical products. Although these workers know their fields of specialty and responsibilities very well whether it be in product research and development regulatory affairs manufacturing packaging quality control or marketing and sales they for the most part lack an understanding of precisely how their own contributory pieces fit into the overall scheme of the corporate biotechnology puzzle. The Biotech Business Handbook was written to assist the biotechnologist whether a technician senior scientist manager marketing representative or college student interested in entering the field in building a practical knowledge base of the rapidly expanding and maturing biotechnology segment of the healthcare industry. Because biotechnology in the United States and abroad covers many disciplines much of the information presented in this book deals with the biomedical diagnostic aspects of the industry. Business subjects for the most part unfamiliar to technically oriented people such as the types of biotechnology corporations their business and corporate structures their financing patent and trademark matters their special legal issues and the contributions of their consultants are treated in a manner designed to make them clear and understandable.

Biotechnology has not stood still since 1991 when the first edition of *Biotechnology The Science and the Business* was published. It was the first book to treat the science and business of technology as an integrated subject and was well received by both students and business professionals. All chapters in this second edition have been updated and revised and some new chapters have been introduced including one on the use of molecular genetic techniques in forensic science. Experts in the field discuss a range of biotechnologies including pesticides the flavor and fragrance industry oil production fermentation and protein engineering. On the business side subjects include managing financing and regulation of biotechnology. Some knowledge of the science behind the technologies is assumed as well as a layperson's view of buying and selling. As with the first edition it is expected that this book will be of interest to biotechnology undergraduates postgraduates and those working in the industry along with students of business economics intellectual property law and communications.

Decentering Biotechnology Michael S. Carolan,2016-04-08 *Decentering Biotechnology* explores the nature of technology objects and patent law Investigating the patenting of organic life and the manner in which artifacts of biotechnology are given their object ive appearance Carolan details the enrollment mechanisms that give biotechnology its momentum Drawing on legal judgements and case studies this fascinating book examines the nature of object ification as a thought and a thing without which biotechnology as it is done today would not be possible Unable to reject biotechnology per se recognizing that such a rejection would essentialize the very object ive categories shown to be manufactured Carolan ultimately argues for doing biotechnology differently A theoretically sophisticated analysis of the nature of objects and the role of technology as a form of life which shapes the social landscape *Decentering Biotechnology* engages with questions of power globalization development resistance exclusion and participation that arise from treating biological objects differently from conventional property forms As such it will appeal to social theorists sociologists and philosophers as well as scholars of law and science and technology studies
