Braun, 2012-03-06 Principles of HVAC in Buildings by J W Mitchell and J E Braun provides foundational knowledge for the behavior and analysis of HVAC systems and related devices The emphasis is on the application of engineering principles and features a tight integration of physical descriptions with a software program that allows performance to be directly calculated with results that provide insight into actual behavior The examples end of chapter problems and design projects are more than exercises they represent situations that an engineer might face in practice and are selected to illustrate the complex and integrated nature of an HVAC system or piece of equipment Coverage of material applicable to the field is broad a Fundamentals section on thermodynamics fluid flow heat transfer and psychrometrics types of HVAC systems and components comfort and air quality criteria a Loads section on weather data processing design heating and cooling loads an Equipment section on air and water distribution systems heating and cooling coils cooling towers refrigeration equipment and a Design and Control section on seasonal energy use control techniques supervisory control the HVAC design process and the rules of thumb often used in design The textbook provides a foundation for students and practicing engineers to design HVAC systems for buildings In addition there is extensive supplemental on line material that provides more in depth and comprehensive treatment of equipment and component modeling and performance that is geared towards current and future equipment design engineers

Handbook of Financing Energy Projects Albert Thumann, Eric Woodroof, 2005-01-13 Lack of funding is the number one project killer Most organizations do not have extra cash lying around therefore most projects must be financed to get approval Your energy project may be one of many potential projects from which the CFO can choose only a few If you present your proposal with positive cash flow your project will stand out from the crowd Filled with practical yet innovative financing methods Handbook of Financing Energy Projects provides effective solutions to finance problems The authors delineate the key success factors for structuring a financed energy project and getting it approved They examine and assess the full scope of current project financing including energy service performance contracting rate of return analysis and energy savings measurement and verification You get all the facts you need to assess a project s payback in advance avoid potential risks and hidden costs and assure that their energy projects are an economic success There are many correct ways to assemble

and finance an energy management project The possibilities are limited only by your creativity This book explores successful solutions for every situation and builds increased confidence in your understanding of the many successful ways to assemble and finance an energy management project **2003 ASHRAE Handbook** American Society of Heating, Refrigerating and Air-Conditioning Engineers, 2003 2003 ASHRAE Handbook HVAC Applications SI Version Hard Cover Handbook of Heating, Ventilation, and Air Conditioning Jan F. Kreider, 2000-12-26 The building industry accounts for about 25 percent of the US gross national product through the design construction operation and maintenance of commercial institutional and residential buildings The Handbook of Heating Ventilation and Air Conditioning provides a current comprehensive review of the latest procedures and trends in the industry It combines practice and theory systems and control and modern methods and technologies to provide in one volume all of the design and operation information needed by HVAC engineers Through a link on the CRC Web site owners of the handbook can access new material periodically posted by the author **Essentials of Home Inspection**, 2003 **Principles of Sustainable Energy Systems** Frank Kreith, 2013-08-19 Completely revised and updated Principles of Sustainable Energy Systems Second Edition presents broad based coverage of sustainable energy sources and systems The book is designed as a text for undergraduate seniors and first year graduate students It focuses on renewable energy technologies but also treats current trends such as the expanding use of natural gas from fracking and development of nuclear power It covers the economics of sustainable energy both from a traditional monetary as well as from an energy return on energy invested EROI perspective The book provides complete and up to date coverage of all renewable technologies including solar and wind power biological processes such as anaerobic digestion and geothermal energy The new edition also examines social issues such as food water population global warming and public policies of engineering concern It discusses energy transition the process by which renewable energy forms can effectively be introduced into existing energy systems to replace fossil fuels See What's New in the Second Edition Extended treatment of the energy and social issues related to sustainable energy Analytic models of all energy systems in the current and future economy Thoroughly updated chapters on biomass wind transportation and all types of solar power Treatment of energy return on energy invested EROI as a tool for understanding the sustainability of different types of resource conversion and efficiency projects Introduction of the System Advisor Model SAM software program available from National Renewable Energy Lab NREL with examples and homework problems Coverage of current issues in transition engineering providing analytic tools that can reduce the risk of unsustainable fossil resource use Updates to all chapters on renewable energy technology engineering in particular the chapters dealing with transportation passive design energy storage ocean energy and bioconversion Written by Frank Kreith and Susan Krumdieck this updated version of a successful textbook takes a balanced approach that looks not only at sustainable energy sources but also provides examples of energy storage industrial process heat and modern transportation The authors take an analytical systems approach to energy engineering rather than the more

general and descriptive approach usually found in textbooks on this topic

Emerging Infectious Diseases, 1997 *Life Cycle & Technoeconomic Modeling* Antonio Colmenar Santos, David Borge Diez, Enrique Rosales Asensio, 2020-12-02 This book aims to perform an impartial analysis to evaluate the implications of the environmental costs and impacts of a wide range of technologies and energy strategies This information is intended to be used to support decision making by groups including researchers industry regulators and policy makers Life cycle assessment LCA and technoeconomic analysis can be applied to a wide variety of technologies and energy strategies both established and emerging LCA is a method used to evaluate the possible environmental impacts of a product material process or activity It assesses the environmental impact throughout the life cycle of a system from the acquisition of materials to the manufacture use and final disposal of a product Technoeconomic analysis refers to cost evaluations including production cost and life cycle cost Often in order to carry out technoeconomic analysis researchers are required to obtain data on the performance of new technologies that operate on a very small scale in order to subsequently design configurations on a commercial scale and estimate the costs of such expansions The results of the developed models help identify possible market applications and provide an estimate of long term impacts These methods together with other forms of decision analysis are very useful in the development and improvement of energy objectives since they will serve to compare different decisions evaluating their political and economic feasibility and providing guidance on potential financial and technological risks
