Low-Energy Buildings and District-Energy Systems L.D. Danny Harvey, 2012-08-21 Winner of Choice Magazine Outstanding Academic Titles for 2007 Buildings account for over one third of global energy use and associated greenhouse gas emissions worldwide Reducing energy use by buildings is therefore an essential part of any strategy to reduce greenhouse gas emissions and thereby lessen the likelihood of potentially catastrophic climate change Bringing together a wealth of hard to obtain information on energy use and energy efficiency in buildings at a level which can be easily digested and applied Danny Harvey offers a comprehensive objective and critical sourcebook on low energy buildings Topics covered include thermal envelopes heating cooling heat pumps HVAC systems hot water lighting solar energy appliances and office equipment embodied energy buildings as systems and community integrated energy systems cogeneration district heating and district cooling The book includes exemplary buildings and techniques from North America Europe and Asia and combines a broad holistic perspective with technical detail in an accessible and insightful manner *Principles of Sustainable Energy Systems* Frank Kreith, 2013-08-19 Completely revised and updated Principles of Sustainable Energy Systems Second Edition presents broad based coverage of sustainable energy sources and systems The book is designed as a

text for undergraduate seniors and first year graduate students It focuses on renewable energy technologies but also treats current trends such as the expanding use of natural gas from fracking and development of nuclear power It covers the economics of sustainable energy both from a traditional monetary as well as from an energy return on energy invested EROI perspective The book provides complete and up to date coverage of all renewable technologies including solar and wind power biological processes such as anaerobic digestion and geothermal energy The new edition also examines social issues such as food water population global warming and public policies of engineering concern It discusses energy transition the process by which renewable energy forms can effectively be introduced into existing energy systems to replace fossil fuels See What's New in the Second Edition Extended treatment of the energy and social issues related to sustainable energy Analytic models of all energy systems in the current and future economy Thoroughly updated chapters on biomass wind transportation and all types of solar power Treatment of energy return on energy invested EROI as a tool for understanding the sustainability of different types of resource conversion and efficiency projects Introduction of the System Advisor Model SAM software program available from National Renewable Energy Lab NREL with examples and homework problems Coverage of current issues in transition engineering providing analytic tools that can reduce the risk of unsustainable fossil resource use Updates to all chapters on renewable energy technology engineering in particular the chapters dealing with transportation passive design energy storage ocean energy and bioconversion Written by Frank Kreith and Susan Krumdieck this updated version of a successful textbook takes a balanced approach that looks not only at sustainable energy sources but also provides examples of energy storage industrial process heat and modern transportation The authors take an analytical systems approach to energy engineering rather than the more general and descriptive approach usually found in textbooks on this topic **ASHRAE Handbook**, 1999 Heat and cold storage with PCM Harald Mehling, Luisa F.

Cabeza, 2008-08-15 The years 2006 and 2007 mark a dramatic change of peoples view regarding climate change and energy consumption The new IPCC report makes clear that mankind plays a dominant role on climate change due to CO emissions from energy consumption and that a significant reduction in CO emissions is necessary within decades At the same time the supply of fossil energy sources like coal oil and natural gas becomes less reliable In spring 2008 the oil price rose beyond 100 barrel for the first time in history It is commonly accepted today that we have to reduce the use of fossil fuels to cut down the dependency on the supply countries and to reduce CO emissions The use of renewable energy sources and increased energy efficiency are the main strategies to achieve this goal In both strategies heat and cold storage will play an important role People use energy in different forms as heat as mechanical energy and as light With the discovery of fire humankind was the first time able to supply heat and light when needed About 2000 years ago the Romans started to use ceramic tiles to store heat in under floor heating systems Even when the fire was out the room stayed warm Since ancient times people also know how to cool food with ice as cold storage **Contemporary Ergonomics 1998** Margaret

Hanson,1998-03-30 This series provides a fast track for publication of suitable papers from international contributors The papers are chosen on the basis of abstracts submitted to a selection pannel in the autumn prior to the conference IN addition to mainstream ergonomists and human factor specialists contemporary ergonomicswill appeal to all those who have a

Alejandro García Gil, Eduardo Antonio Garrido Schneider, Miguel Mejías Moreno, Juan Carlos Santamarta Cereza, 2022-01-31 This book is the outcome of more than a decade of research and technical development activities at Spain's Geological Survey IGME concerning shallow geothermal energy which were pursued in collaboration with other public bodies and European entities. It presents a compilation of papers on the theoretical foundations of and practical aspects needed to understand the thermal regime of the topmost subsoil up to 400 m deep and the exceptional properties that this underground environment offers which make it the ideal thermal reservoir for heating ventilation and air conditioning HVAC. In the book's first section the basic theory of thermodynamics as applied to shallow geothermal energy heat transfer and fluid mechanics in the geological porous medium is developed. The nature of the subsoil's thermal regime in general and in the urban environment in particular is described. The second section introduces readers to the fundamental aspects of thermal installations equipped with geothermal heat pumps, describes the types of geothermal exchangers most commonly used and reviews the techniques used to obtain the thermal parameters of the terrain. It also discusses the potential environmental impacts of shallow geothermal activity and corresponding management strategies as well as the legal aspects of its regulation for the governance of shallow geothermal resources in the EU in general and Spain in particular. In closing the book highlights examples of the methodologies applications developed by IGME in the city of Zaragoza and the Canary Islands. The theoretical foundations systematics and concrete applications make the book a valuable reference source for hydrogeologists engineers and specialized technicians alike. *Environmental Design of Urban Buildings* Mat Santamouris, 2013-06-17 This book provides a review of environmental and energy research with respect to urban building projects. It describes how to overcome related challenges in environmental design of urban buildings. The book discusses the passive and active environmental systems within building concepts. Roof Cooling Techniques Eviatar Erell, 2013-04-03 Natural heating and cooling of buildings helps to improve energy efficiency in the built environment. This book considers the principles of roof design and specific systems and cooling techniques. The authors explain the fundamental principles of roof cooling and describe in detail the relevant components applications built precedents recent experimental work and key design considerations. Specific systems and techniques are examined including the main advantages and disadvantages of each strategy. Environmental functions are considered in terms of protective strategies and selective strategies. Protective strategies include solar control thermal insulation heat storage and thermal inertia. Selective strategies include radiative evaporative and convective cooling and planting of roofs. Traditional and current roof construction practices are described exemplified by case studies from across Europe. Including downloadable resources with software that enables readers to evaluate their own designs this book will be invaluable for architects and engineers who wish to create buildings that are more energy efficient. **Sustainable Buildings in Practice** George Baird, 2010-01-29 Current assessment methods of sustainable buildings do not adequately account for the users' needs. Given that over the life of a building total salary costs far

outweigh both operating costs and combined capital and rental costs the occupants needs are not something which should be sensibly ignored This book presents an unbiased evaluation of thirty of the most cutting edge sustainable buildings in the world in terms of the users perceived comfort health and productivity The author has visited the buildings interviewed the design teams and examined the findings of a sixty question standardized user questionnaire The book provides thirty case studies covering mixed mode passive and environmentally sustainable commercial and institutional buildings detailed insights into the principles underlying the design of sustainable buildings worldwide over several climatic zones and eleven countries together with clear explanations and illustrations of innovative design practice a discussion of common issues and the lessons that may be learnt from a study of the performance of sustainable buildings in practice from the point of view of the people who use them This important book will be of great benefit to architects and engineers facility managers of commercial and institutional buildings as well as developers and researchers academics and students in these fields

Urban Heat Stress and Mitigation Solutions Vincenzo Costanzo,Gianpiero Evola,Luigi Marletta,2021-09-08 This book provides the reader with an understanding of the impact that different morphologies construction materials and green coverage solutions have on the urban microclimate thus affecting the comfort conditions of urban inhabitants and the energy needs of buildings in urban areas The book covers the latest approaches to energy and outdoor comfort measurement and modelling on an urban scale and describes possible measures and strategies to mitigate the effects of the mutual interaction between urban settlements and local microclimate Despite its relevance only limited literature is currently devoted to appraising from an engineering perspective the intertwining relationships between urban geometry and fabrics energy fluxes between buildings and their surroundings outdoor microclimate conditions and building energy demands in urban areas This book fills this gap by first discussing the physical processes that govern heat and mass transfer at an urban scale while emphasizing the role played by different spatial arrangements manmade materials and green infrastructures on the outdoor microclimate The first chapters also address the implications of these factors on the outdoor comfort conditions experienced by pedestrians and on the buildings energy demand for space heating and cooling Then based upon cutting edge experimental activities and simulation work this book demonstrates current and forthcoming adaptation and mitigation strategies to improve the urban microclimate and its impact on the built environment such as cool materials thermochromic and retroreflective finishing materials and green infrastructures applied either at a building scale or at the urban scale The effect of these solutions is demonstrated for different cities worldwide under a range of climate conditions Finally the book opens a wider perspective by introducing the basic elements that allow fuel poverty raw materials consumption and the principles of circular economy in the definition of a resilient urban settlement **Annual IEEE Semiconductor Thermal Measurement and Management Symposium** ,2001 *The Architectural Expression of Environmental Control Systems* George Baird,2003-09-02 Examines the ways design teams can take a more creative approach to the design and expression of

both active and passive environmental control systems Case Studies from around the world including many award winning buildings *New Serial Titles* ,1999 A union list of serials commencing publication after Dec 31 1949
