Developments in Modern Racecar Driver Crash Protection and Safety John Melvin, J Kirk Russell, 2013-10-14 For many years the evolution of safety improvements in motorsports was the result of a combination of science and perceived safe practices Most safety developments were not based on rigorous laboratory testing but rather on intuition and a let's try it and see what happens approach During the last few decades motorsports has benefited from the organized research efforts made possible by academia manufacturers and sanctioning bodies leading to present day motorsports safety methodologies based on solid data and testing This compendium edited by some of the foremost racing safety experts comprises selected technical papers that document the development and implementation of key motorsports safety technologies now in use It is intended to provide racing professionals and enthusiasts with a concise overview of the significant engineering developments in motorsports driver safety that has occurred during the past two decades The 13 papers chosen for this compendium published between 1990 and 2013 reflect landmark safety studies and developments of that time Eleven of the papers were published by SAE International and two were presented at the Stapp Car Crash Conference The papers cover the following topics Crash testing simulations Human crash injury and survival Reducing driver injury in severe crashes Head and neck restraints including the HANS device Race car seats Restraint systems Track safety and barrier systems The final paper is a study on the detailed performance of restraint systems and seats in examples of severe stock car crashes The paper represents a succinct example of modern crash investigation of racing crashes with crash recording data detailed injury analysis and protective system performance The progress in motorsports safety as described in this compendium has been dramatically effective in reducing driver injuries at the top levels of motorsports Unfortunately this is not true at the lower levels where drivers continue to suffer preventable injuries and fatalities 1998 Motorsports Engineering Conference

Human-Computer Interaction Andrew Sears, Julie A. Jacko,2009-03-02 Hailed on first publication as a compendium of foundational principles and cutting edge research The Human Computer Interaction Handbook has become the gold standard reference in this field While human computer interaction may have emerged from within computing significant contributions have come from a variety of fields including industrial engineering psychology education and graphic design No where is this more apparent then when designing solutions for users as diverse as children older adults and individuals with physical cognitive visual or hearing impairments Derived from select chapters in The Human Computer Interaction Handbook this volume emphasizes design for these groups and also discusses HCI in the context of specific domains including healthcare games and the aerospace industry

Driver Distraction Michael A. Regan, John D. Lee, Kristie Young,2008-10-15 Certain

activities and events both inside and outside a vehicle can distract drivers and lead to degraded performance New technologies such as entertainment communication and driver assistance systems play a significant role in distraction This unique volume defines driver distraction discusses various causes and explains how to measure acceptable and unacceptable levels of distraction Several chapters address measurement techniques based on performance and epidemiological studies Most importantly the text explores ways to mitigate driver distraction as well as countermeasures including vehicle design and effective legislation

Evaluation of Human Work John R. Wilson, Sarah Sharples, 2015-04-16 Written by experts with real world experience in applying ergonomics methodology in a range of contexts Evaluation of Human Work Fourth Edition explores ergonomics and human factors from a doing it perspective More than a cookbook of ergonomics methods the book encourages students to think about which methods they should apply when and why

Vehicle Dynamics Estimation using Kalman Filtering Moustapha Doumiani, Ali Charara, Alessandro Victorino, Daniel Lechner, 2012-12-14 Vehicle dynamics and stability have been of considerable interest for a number of years The obvious dilemma is that people naturally desire to drive faster and faster yet expect their vehicles to be infinitely stable and safe during all normal and emergency maneuvers For the most part people pay little attention to the limited handling potential of their vehicles until some unusual behavior is observed that often results in accidents and even fatalities This book presents several model based estimation methods which involve information from current potential integrable sensors Improving vehicle control and stabilization is possible when vehicle dynamic variables are known The fundamental problem is that some essential variables related to tire road friction are difficult to measure because of technical and economical reasons Therefore these data must be estimated It is against this

background that this book's objective is to develop estimators in order to estimate the vehicle's load transfer, the sideslip angle and the vertical and lateral tire road forces using a roll model. The proposed estimation processes are based on the state observer Kalman filtering theory and the dynamic response of a vehicle instrumented with standard sensors. These estimators are able to work in real time in normal and critical driving situations. Performances are tested using an experimental car in real driving situations. This is exactly the focus of this book, providing students, technicians and engineers from the automobile field with a theoretical basis and some practical algorithms useful for estimating vehicle dynamics in real time during vehicle motion.

New Trends and Developments in Automotive System Engineering Marcello Chiaberge, 2011-01-08

In the last few years the automobile design process is required to become more responsible and responsibly related to environmental needs. Basing the automotive design not only on the appearance, the visual appearance of the vehicle needs to be thought together and deeply integrated with the power developed by the engine. The purpose of this book is to try to present the new technologies development scenario and not to give any indication about the direction that should be given to the research in this complex and multi-disciplinary challenging field.
