High-dimensional Nonlinear Diffusion Stochastic Processes Yevgeny Mamontov, Magnus Willander, 2001-01-19 This book is the first one devoted to high dimensional or large scale diffusion stochastic processes DSPs with nonlinear coefficients These processes are closely associated with nonlinear Ito s stochastic ordinary differential equations ISODEs and with the space discretized versions of nonlinear Ito s stochastic partial integro differential equations The latter models include Ito s stochastic partial differential equations ISPDEs The book presents the new analytical treatment which can serve as the basis of a combined analytical numerical approach to greater computational efficiency in engineering problems A few examples discussed in the book include the high dimensional DSPs described with the ISODE systems for semiconductor circuits the nonrandom model for stochastic resonance and other noise induced phenomena in high dimensional DSPs the modification of the well known stochastic adaptive interpolation method by means of bases of function spaces ISPDEs as the tool to consistently model non Markov phenomena the ISPDE system for semiconductor devices the corresponding classification of charge transport in macroscale mesoscale and microscale semiconductor regions based on the wave diffusion equation the fully time domain nonlinear friction aware analytical model for the velocity covariance of particle of uniform fluid simple or dispersed the specific time domain analytics for the long non exponential tails of the velocity in case of the hard sphere fluid These examples demonstrate not only the capabilities of the developed techniques but also emphasize the usefulness of the complex system related approaches to solve some problems which have not been solved with the traditional statistical physics methods yet From this veiwpoint the book can be regarded as a kind of complement to such books as Introduction to the Physics of Complex Systems The Mesoscopic Approach to Fluctuations Nonlinearity and Self Organization by Serra Andretta Compiani and Zanarini Stochastic Dynamical Systems Concepts Numerical Methods Data Analysis and Statistical Physics An Advanced Approach with Applications by Honerkamp which deal with physics of complex

Extended Abstracts of 1998 Sixth International Workshop on Computational Electronics IEEE Electron Devices Society, 1998 IWCE covers all aspects of advanced simulation of semiconductor process devices and electronic transport in semiconductors particularly those aspects that utilize intensive computational resources Topics include advances in 2 D and 3 D standard simulation and particle simulation methods

Transport in Transition Regimes Ben Abdallah Naoufel, Anton Arnold, Pierre Degond, Irene M. Gamba, Robert T. Glassey, C. David Levermore, Christian Ringhofer, 2012-12-06 IMA Volumes 135 Transport in Transition Regimes and 136 Dispersive Transport Equations and Multiscale Models focus on the modeling of processes for which transport is one of the most complicated components This includes processes that involve a wide range of length scales over different spatio temporal regions of the problem ranging from the order of mean free paths to many times this scale Consequently effective modeling techniques require different transport models in each region The first issue is that of finding efficient simulations techniques since a fully resolved kinetic simulation is often impractical One therefore develops homogenization stochastic or moment based subgrid models Another issue is to quantify the discrepancy between macroscopic models and the underlying kinetic description especially when dispersive effects become macroscopic for example due to quantum effects in semiconductors and superfluids These two volumes address these questions in relation to a wide variety of application areas such as semiconductors plasmas fluids chemically reactive gases etc

Buitelaar, P. Cimiano, 2008-01-31 The promise of the Semantic Web is that future web pages will be annotated not only with bright colors and fancy fonts as they are now but with annotation extracted from large domain ontologies that specify to a computer in a way that it can exploit what information is contained on the given web page The presence of this information will allow software agents to examine pages and to make decisions about content as humans are able to do now The classic method of building an ontology is to gather a committee of experts in the domain to be modeled by the ontology and to have this committee agree on which concepts cover the domain on which terms describe which concepts on what relations exist between each concept and what the possible attributes of each concept are All ontology learning systems begin with an ontology structure which may just be an empty logical structure and a collection of texts in the domain to be modeled An ontology learning system can be seen as an interplay between three things an existing ontology a collection of texts and lexical syntactic patterns The Semantic Web will only be a reality if we can create structured unambiguous ontologies that model domain knowledge that computers can handle The creation of vast arrays of such ontologies to be used to mark up web pages for the Semantic Web can only be

accomplished by computer tools that can extract and build large parts of these ontologies automatically This book provides the state of art of many automatic extraction and modeling techniques for ontology building The maturation of these techniques will lead to the creation of the Semantic Web **Computer Aided Design and Design Automation** Wai-Kai Chen,2018-03-12 This volume of The Circuits and Filters Handbook Third Edition focuses on computer aided design and design automation In the first part of the book international contributors address topics such as the modeling of circuit performances symbolic analysis methods numerical analysis methods design by optimization statistical design optimization and physical design automation In the second half of the text they turn their attention to RF CAD high performance simulation formal verification RTK behavioral synthesis system level design an Internet based micro electronic design automation framework performance modeling and embedded computing systems design *Web Technologies: Concepts, Methodologies, Tools, and Applications* Tatnall, Arthur,2009-10-31 With the technological advancement of mobile devices social networking and electronic services Web technologies continues to play an ever growing part of the global way of life incorporated into cultural economical and organizational levels Web Technologies Concepts Methodologies Tools and Applications 4 Volume provides a comprehensive depiction of current and future trends in support of the evolution of Web information systems Web applications and the Internet Through coverage of the latest models concepts and architectures this multiple volume reference supplies audiences with an authoritative source of information and direction for the further development of the Internet and Web based phenomena
