The European Information Society Lars Bernard,Anders

Friis-Christensen,Hardy Pundt,2008-04-11 The Association of Geographic Information Laboratories for Europe AGILE was established in early 1998 to promote academic teaching and research on GIS at the European level AGILE seeks to ensure that the views of the geographic information teaching and research community are fully represented in the discussions that take place on future European search agendas and it also provides a permanent scientific forum where geographic

information researchers can meet and exchange ideas and experiences at the European level. In 2007 AGILE provided for the first time since its existence a book constituting a collection of scientific papers that were submitted as full papers to the annual AGILE conference and went through a competitive and thorough review process. Published in the Springer Lecture Notes in Geoinformation and Cartography this first edition was well received within AGILE and within the European Geoinformation Science community as a whole. Thus the decision was easily made to establish a Springer th Volume for the 11 AGILE conference held 2008 in Girona Spain and led to what you now hold in your hands.

Information Visualization

Chaomei Chen, 2006-10-23 Information visualization is not only about creating graphical displays of complex and latent information structures it contributes to a broader range of cognitive social and collaborative activities. This is the first book to examine information visualization from this perspective. This 2nd edition continues the unique and ambitious quest for setting information visualization and virtual environments in a unifying framework. Information Visualization Beyond the Horizon pays special attention to the advances made over the last 5 years and potentially fruitful directions to pursue. It is particularly updated to meet the need for practitioners. The book is a valuable source for researchers and graduate students. This new edition is forwarded by Ben Shneiderman University of Maryland.

Annual Review of Information Science and Technology

Blaise Cronin, 2004 ARIST published annually since 1966 is a landmark publication within the information science community. It surveys the landscape of information science and technology providing an analytical authoritative and accessible overview of recent trends and significant developments. The range of topics varies considerably reflecting the dynamism of the discipline and the diversity of theoretical and applied perspectives. While ARIST continues to cover key topics associated with classical information science e.g. bibliometrics, information retrieval editor Blaise Cronin is selectively expanding its footprint in an effort to connect information science more tightly with cognate academic and professional communities.

Web-based Support Systems

JingTao Yao, 2010-03-02 Web based Support Systems WSS are an emerging multidisciplinary research area in which one studies the support of human activities with the Web as the common platform medium and interface.

The Internet affects every aspect of our modern life. Moving support systems to online is an increasing trend in many research domains. One of the goals of WSS research is to extend the human physical limitation of information processing in the information age. Research on WSS is motivated by the challenges and opportunities arising from the Internet. The availability, accessibility and credibility of information as well as the tools to access this information lead to a vast amount of opportunities. However, there are also many challenges we face. For instance, we have to deal with more complex tasks as there are increasing demands for quality and productivity. WSS research is a natural evolution of the studies on various computerized support

systems such as Decision Support Systems DSS Computer Aided Design CAD and Computer Aided Software Engineering CASE The recent advancement of computer and Web technologies make the implementation of more feasible WSS Nowadays it is rare to see a system without some type of Web interaction The research of WSS is classified into four groups WSS for specific domains Digital Media: The Future John Vince,Rae Earnshaw,2013-04-17 This volume presents state of the art research from a wide area of subjects brought about by the digital convergence of computing television telecommunications and the World Wide Web It represents a unique snapshot of trends across a wide range of subjects including virtual environments virtual reality telepresence human computer interface design interactivity avatars and the Internet Both researchers and practitioners will find it an invaluable source of reference
