*The Art of Inquiry* Nancy Lee Cecil, Jeanne Pfeifer, 2011-03-07 Asking questions is one of the most essential functions of teaching In this book the authors Nancy Lee Cecil and Jeanne Pfeifer show teachers how to develop both their own questioning skills and those of their students The authors explain how to model provocative open ended questions and provides many useful teacher and student directed questioning strategies From these strategies children learn how to ask questions that enable them to construct their own meaning from what they read and experience

This revised edition includes several new questioning strategies. In addition, many of the strategies found in the original edition have been updated and/or expanded to reflect today's best practices in education. The Art of Inquiry is divided into two sections. Part I identifies the many types of questions and the thinking skills they promote, such as knowledge comprehension, analysis, and evaluation, and discusses how to foster the free flow of questions and answers. Part II provides practical questioning strategies and activities, for example, Polar Opposite, Think Aloud, and Self Instruction, that stimulate the highest critical and creative thinking skills. The authors also show how asking the right questions can help children to understand content, learn to ask effective questions of themselves, and make clear connections between diverse thoughts.

*Handbook of Research on Advancing Critical Thinking in Higher Education* Wisdom, Sherrie, Leavitt, Lynda, 2015-07-17

The importance of critical thinking has surged as academics in higher education realize that many students upon entering college lack the critical thinking skills necessary to succeed. While much has been written regarding the lack of critical thinking, less has been written on the success of methods implemented to develop this fundamental skill. The Handbook of Research on Advancing Critical Thinking in Higher Education explores the effective methods and tools being used to integrate the development of critical thinking skills in both undergraduate and graduate studies. Due to the difficulties associated with teaching critical thinking skills to learners of any age, this publication is a crucial addition to the scholarly reference works available to pre-service and early career teachers, seasoned educational professionals, professors across disciplines, curriculum specialists, and educational administrators.

**Mind in Art** Charles M. Dorn, 1999. This book is for the reader who believes that thinking about and making art is intelligent behavior and that art as a subject in the K-12 school curriculum should not be used as an alibi for other curricular objectives. It examines and makes explicit those cognitive behaviors normally associated with most higher order thinking and problem solving activity and explains how they function in the act of creative forming. Its goal is ultimately to find ways to use these behaviors in the construction of an intelligent art curriculum for K-12 American schools. This is perhaps the only text in the field designed to assist teachers in meeting the challenges of teaching in the Goals 2000 curriculum and evaluation reform effort, acquainting them with both the National Art Standards and with the assessment processes needed in order for them to become accountable. Mind in Art grapples with current and relevant theory, research, and unsolved problems. It is cohesive as it attempts to bring together information that is only partially known, even among those who are college professors. And it takes a critical look at the ideas and points of view that have created divisiveness and shabby thinking in the field. In this book, Charles Dorn significantly advances thinking in the field of art education.
