The Future of Post-Human Performing Arts

Peter Baofu, 2013-01-03 Are the performing arts really supposed to be so radical that as John Cage once said in the context of music there is no noise only sound since he argued that any sounds we can hear can be music WK 2007a D Harwood 1976 This radical tradition in performing arts with music as an example here can be contrasted with an opposing view in the older days when Greek philosophers and medieval theorists in music defined music as tones ordered horizontally as melodies and vertically as harmonies Music theory within this realm is studied with the presupposition that music is orderly and often pleasant to hear WK 2007a Contrary to these opposing traditions and other views as will be discussed in the book performing arts in relation to both the body and its presence is neither possible nor desirable to the extent that the respective ideologues on different sides would like us to believe Needless to say the challenge to these opposing traditions in performing arts does not imply that performing arts are worthless human endeavors or that those fields of study related to performing arts like aesthetics acoustics communication studies psychology culture studies sociology religion morality and so on should be rejected too Of course neither of these extreme views is reasonable Instead this book provides an alternative better way of understanding the future of performing arts especially in the dialectic context of the body and its presence while learning from different approaches in the literature but without favoring any one of them or integrating them since they are not necessarily compatible with each other In other words this book offers a new theory that is the transdisciplinary theory of performing arts to go beyond the existing approaches in a novel way If successful this seminal project will fundamentally change the way that we think about performing arts from the combined perspectives of the mind nature society and culture with enormous implications for the human future and what the author originally called its post human fate Psychic

Design Strategies for Reimagining the City Linda Matthews, 2022-06-24 Design Strategies for Reimagining the City is situated between projective geometry optical science and architectural design It draws together seemingly unrelated fields in a series of new digital design tools and techniques underpinned by tested prototypes The book reveals how the relationship between architectural design and the ubiquitous urban camera can be used to question established structures of control and ownership inherent within the visual model of the Western canon Using key moments from the broad trajectory of historical and contemporary representational mechanisms and techniques it describes the image's impact on city form from the inception of linear perspective geometry to the digital turn The discussion draws upon combined fields of digital geometry the pictorial adaptation of human optical cues of colour brightness and shape and modern image capture technology webcams mobile phones and UAVs to demonstrate how the permeation of contemporary urban space by digital networks calls for new architectural design tools and techniques A series of speculative drawings and architectural interventions that apply the new design tools and techniques complete the book Aimed at researchers academics and upper level students in digital design and theory it makes a timely contribution to the ongoing and broadly debated relationship between representation and architecture

Modernist Aesthetics in Taiwanese Poetry since the 1950s Chung-to Au, 2008-05-31 Much of the previous scholarship on Taiwanese modernist poetry easily falls into ideological arguments This book participates in the development of an alternative approach to understanding Taiwanese modernist poetry Dr Au's approach

emphasizes the diversity and intensity of experiences of place and placelessness in the work of five poets Lomen Luo Fu Rong Zi Yu Guangzhong and Zheng Chouyu The phenomenon of placelessness is a problem in all modernity and so modern aesthetics is an outgrowth of modern society's sense of placelessness This book not only shows how place becomes placelessness but also analyses Taiwanese modernist poets responses to the phenomenon of placelessness Four kinds of places are examined namely the house the city homeland and an imagined literary community in this work The result is both refreshing and original

The Elusive Synthesis: Aesthetics and Science A.I. Tauber, 2012-12-06 The tension between art and science may be traced back to the Greeks What became natural philosophy and later science has traditionally been posed as a fundamental alternative to poetry and art It is a theme that has commanded central attention in Western thought as it captures the ancient conflict of Apollo and Dionysus over what deserves to order our thought and serve as the aspiration of our cultural efforts The modern schism between art and science was again clearly articulated in the Romantic period and seemingly grew to a crescendo fifty years ago as a result of the debate concerning atomic power The discussion has not abated in the physical sciences and in fact has dramatically expanded most prominently into the domains of ecology and medicine Issues concerning the role of science in modern society although heavily political must be regarded at heart as deeply embedded in our cultural values Although each generation addresses them anew the philosophical problems which lay at the foundation of these fundamental concerns always appear fresh and difficult This anthology of original essays considers how science might have a greater commonality with art than was perhaps realized in a more positivist era The contributors are concerned with how the aesthetic participates in science both as a factor in constructing theory and influencing practice The collection is thus no less than a spectrum of how Beauty and Science might be regarded through the same prism
