Education in Twelfth-century Art and Architecture Laura Cleaver, 2016 A study of the representation of education in material culture at a period of considerable change and growth On the facade of Chartres cathedral serene personifications of the arts of grammar rhetoric dialectic music arithmetic geometry and astronomy present passers by with a vision of education as an improving process leading to greater knowledge of God The arts proved a popular subject in medieval imagery and were included in manuscripts stained glass and luxury metalwork objects as well as on the facades of churches These idealized figures contrast with many textual accounts of education in which authors recorded the hardships of student poverty and the temptations of drink and women to be found in the cities where teachers were increasingly establishing themselves This book considers how and why education was explored in the art and architecture of the twelfth century Through analysis of imagery in a wide range of media it examines how teachers and students sought to use images to enhance their reputations and the status of their studies It also investigates how the ideal models often set out in imagery compared with contemporary practice in an era that saw significant changes beginning with a shift away from monastic education and culminating in the appearance of the first universities LAURA CLEAVER is Senior Lecturer in Manuscript Studies Institute of English Studies University of London
