Perspectives on Garden Histories Michel Conan, 1999

Garden history is a discipline of contested purposes. Perspectives on Garden Histories contributes to a self-critical examination of this emergent field of study at the same time offering an overview of its main achievements in several domains such as Italian and Mughal gardens and of the new kinds of investigation to which they have led. In its early years garden history centered on architectural studies of garden design but in the 1960s the emphasis shifted from garden design to garden meaning. The new paradigm considered gardens as complex works of art and demanded an extensive documentation of the historical context as well as of the figurative and discursive sources. This approach in its turn was challenged by neo-Marxist scholars who proceeded to view landscape appreciation as an ideological superstructure, an outgrowth of agricultural production processes. Garden designs and their histories can also be viewed as expressions of ideological conflicts in society. Neither gardens nor their history can thus be studied independently of the social, cultural, and political movements that give prominence to the contested ideologies. Gardens can be used to foster some ideologies or reflect a reaction against a social change. Comparative research offers another fascinating approach, exploring the relations between European landscape concepts and other cultural contexts and discussing issues of cultural dominance and interpretation. The emergence of various perspectives has led to the incorporation of further questions into the domain of garden studies, which has been moving in new directions and using new methods in search of an adapted theoretical framework. This volume offers a striking view of changes taking place in the discipline.

Handbook of Research in the Social Foundations of Education Steven Tozer, Bernardo P. Gallegos, Annette Henry, Mary Bushnell Greiner, Paula Groves Price, 2011-07-05. Parts one and two of this volume present the theoretical lenses used to study the social contexts of education. These include long-established foundations disciplines such as sociology of education and philosophy of education as well as newer theoretical perspectives such as critical race theory, feminist educational theory, and cultural studies in education. Parts three, four, and five demonstrate how these theoretical lenses are used to examine such phenomena as globalization, media, popular culture, technology, youth culture, and schooling. This groundbreaking volume helps readers understand the history, evolution, and significance of this wide-ranging, often misunderstood and increasingly important field of study. This book is appropriate as a reference volume not only for scholars in the social foundations of education but also for scholars interested in the cultural contexts of teaching and learning, formal and informal. It is also appropriate as a textbook for graduate-level courses in Social Foundations of Education, School and Society, Educational Policy Studies, Cultural Studies in Education, and Curriculum and Instruction.
