Beyond Modern Sculpture The Effects Of S:

Beyond Modern Sculpture J. Burnham, 1968 **The Art and Science of Interface and Interaction Design** Christa Sommerer, Laurent Mignonneau, 2008-08-19 Artists and creators in interactive art and interaction design have long been conducting research on human machine interaction Through artistic conceptual social and critical projects they have shown how interactive digital processes are essential elements for their artistic creations Resulting prototypes have often reached beyond the art arena into areas such as mobile computing intelligent ambiences intelligent architecture fashionable technologies ubiquitous computing and pervasive gaming Many of the early artist developed interactive technologies have influenced new design practices products and services of today s media society This book brings together key theoreticians and practitioners of this field It shows how historically relevant the issues of interaction and interface design are as they can be analyzed not only from an engineering point of view but from a social artistic and conceptual and even commercial angle as well **New Tendencies** Armin Medosch, 2022-11-01 An account of a major international art movement originating in the former Yugoslavia in the 1960s which anticipated key aspects of information aesthetics New Tendencies a nonaligned modernist art movement emerged in the early 1960s in the former Yugoslavia a nonaligned country It represented a new sensibility rejecting both Abstract Expressionism and socialist realism in an attempt to formulate an art adequate to the age of advanced mass production In this book Armin Medosch examines the development of New Tendencies as a major international art movement in the context of social political and technological history Doing so he traces concurrent paradigm shifts the change from Fordism the political economy of mass production and consumption to the information society and the change from postwar modernism to dematerialized postmodern art practices Medosch explains that New Tendencies rather than opposing the forces of technology as most artists and intellectuals of the time did imagined the rapid advance of technology to be a springboard into a future beyond alienation and oppression Works by New Tendencies cast the viewer as coproducer abolishing the idea of artist as creative genius and replacing it with the notion of the visual researcher In 1968 and 1969 the group actively turned to the computer as a medium of visual research anticipating new media and digital art Medosch discusses modernization in then Yugoslavia and other nations on the periphery looks in detail at New Tendencies five major exhibitions in Zagreb the capital of Croatia and considers such topics as the group s relation to science the changing relationship of manual and intellectual labor New Tendencies in the international art market their engagement with computer art and the group s eventual eclipse by other new art practices including conceptualism land art and arte povera Numerous illustrations document New Tendencies works and exhibitions **Robots and Art** Damith Herath, Christian Kroos, Stelarc, 2016-05-04 The first compendium on robotic art of its kind this book explores the integration of robots into human society and our attitudes fears and hopes in a world shared with autonomous machines It raises questions about the benefits risks and ethics of the transformative changes to society that are the consequence of robots taking on new roles

alongside humans It takes the reader on a journey into the world of the strange the beautiful the uncanny and the daring and into the minds and works of some of the world s most prolific creators of robotic art Offering an in depth look at robotic art from the viewpoints of artists engineers and scientists it presents outstanding works of contemporary robotic art and brings together for the first time some of the most influential artists in this area in the last three decades Starting from a historical review this transdisciplinary work explores the nexus between robotic research and the arts and examines the diversity of robotic art the encounter with robotic otherness machine embodiment and human robot interaction Stories of difficulties pitfalls and successes are recalled characterising the multifaceted collaborations across the diverse disciplines required to create robotic art Although the book is primarily targeted towards researchers artists and students in robotics computer science and the arts its accessible style appeals to anyone intrigued by robots and the arts

From Counterculture to Cyberculture Fred Turner, 2024-05-31 In this unique provocative work of cultural history Turner teases apart the visions myths and rhetoric that have swept us into cyberspace Booklist starred review In the early 1960s computers haunted the American popular imagination Bleak tools of the cold war they embodied the rigid organization and mechanical conformity that made the military industrial complex possible But by the 1990s and the dawn of the Internet computers started to represent a very different kind of world a collaborative and digital utopia modeled on the communal ideals of the hippies who so vehemently rebelled against the cold war establishment in the first place From Counterculture to Cyberculture is the first book to explore this extraordinary and ironic transformation Fred Turner here traces the previously untold story of a highly influential group of San Francisco Bay area entrepreneurs Stewart Brand and the Whole Earth network Between 1968 and 1998 via such familiar venues as the National Book Award winning Whole Earth Catalog the computer conferencing system known as WELL and ultimately the launch of the wildly successful Wired magazine Brand and his colleagues brokered a long running collaboration between San Francisco flower power and the emerging technological hub of Silicon Valley Thanks to their vision counterculturalists and technologists alike joined together to reimagine computers as tools for personal liberation the building of virtual and decidedly alternative communities and the exploration of bold new social frontiers Shedding new light on how our networked culture came to be this fascinating book reminds us that the distance between the Grateful Dead and Google between Ken Kesey and the computer itself is not as great as we might think

The Point of Being Cristina Miranda de Almeida, Derrick de Kerckhove, 2014-06-19 Current digital processes of production reproduction and distribution of information affect the perception of time space matter senses and identity This book explores the research question what are the psycho physiological dimensions of the ways people experience their presence in the world and the world s presence in them Because they deal principally with issues of perception and sentience with a particular emphasis on art there is in all chapters an invitation to experience a shift of perception An embodied sensation of the world and a re sensorialization of the environment are described to complement the visually biased perspective with a renewed sense of humans relationship to

their spatial and material surrounding As such this book presents the topological reunion of sensation and cognition of sense and sensibility and of body self and world The perception of the Point of Being to which the various chapters of this book invite the reader proposes an alternative to the Point of View inherited from the Renaissance it offers a way to situate the sense of self through the physical digital and electronic domains that shape physical social cultural economic and spiritual conditions at the beginning of the twenty first century Nine authors explore different ways in which the paradigm of the Point of Being can bridge the interval the discontinuity between subjects and objects that began with the diffusion of the phonetic alphabet The Point of Being is a signpost on that journey

Biocentrism and Modernism Oliver A.I. Botar,2017-07-05 Examining the complex intersections between art and scientific approaches to the natural world Biocentrism and Modernism reveals another side to the development of Modernism While many historians have framed this movement as being mechanistic and against nature the essays in this collection illuminate the role that nature centric ideologies played in late nineteenth to mid twentieth century Modernism The essays in Biocentrism and Modernism contend that it is no accident that Modernism arose at the same time as the field of modern biology From nineteenth century discoveries to the emergence of the current environmentalist movement during the 1960s artists architects and urban planners have responded to currents in the scientific world Sections of the volume treat both philosophic worldviews and their applications in theory historiography and urban design This collection also features specific case studies of individual artists including Raymond Duchamp Villon Paul Klee Wassily Kandinsky and Jackson Pollock

Art as Contemplative Practice Michael A. Franklin,2017-09-01 Drawing upon his personal experience as a practitioner researcher visual artist and cancer survivor Michael A Franklin offers a rich and thought provoking guide to art as contemplative practice His firsthand experience and original artwork complement this extensive discussion by consulting various practice traditions including yoga rasa and darshan experiences imaginal intelligence and the contemplative instincts of select early twentieth century artists From this synthesis Franklin suggests that we treat art as a form of yoga and meditation with the potential to awaken deeper insight into the fundamental nature of the Self Exercises and rubrics are included that offer accessible instruction for any artist meditation or yoga practitioner art educator or art therapist

The Sculptural Imagination Alex Potts,2000-01-01 Potts also offers a detailed view of selected iconic works by sculptors ranging from Antonio Canova and Auguste Rodin to Constantin Brancusi David Smith Carl Andre Eva Hesse and Louise Bourgeois key players in modern thinking about the sculptural The impact of minimalism features prominently in this discussion for it disrupted accepted understanding of how a viewer interacts with a work of art thereby placing the phenomenology of viewing three dimensional objects for the first time at the center of debate about modern visual art Jacket

The Systemic Image Inge Hinterwaldner,2023-10-31 A new conceptualization of the relationship between the systemic and the iconic in real time simulations that distinguishes among four levels of forming Computer simulations conceive objects and situations dynamically in their changes and progressions In

The Systemic Image Inge Hinterwaldner considers not only the technical components of dynamic computer simulations but also the sensory aspects of the realization Examining the optic the acoustic the tactile and the sensorimotor impressions that interactive real time simulations provide she finds that iconicity plays a dominant yet unexpected role Based on this and close readings of a series of example works Hinterwaldner offers a new conceptualization of the relationship between systemic configuration and the iconic aspects in these calculated complexes Hinterwaldner discusses specifications of sensorialization necessary to make the simulation dynamic perceivable Interweaving iconicity with simulation she explores the expressive possibilities that can be achieved under the condition of continuously calculated explicit changes She distinguishes among four levels of forming the systems perspective as a process and schema that establishes the most general framework of simulations the mathematical model which marks off the boundaries of the simulation s actualization the iconization and its orientation toward the user and interaction design necessary for the full unfolding of the simulation The user makes manifest what is initially latent Viewing the simulation as an interface Hinterwaldner argues that not only does the sensorially designed aspect of the simulation seduce the user but the user also makes an impact on the simulation on the dynamic and perhaps on the iconization although not on the perspectivation The influence is reciprocal *The Cybernetic Brain* Andrew Pickering, 2010-04-15 Cybernetics is often thought of as a grim military or industrial science of control But as Andrew Pickering reveals in this beguiling book a much more lively and experimental strain of cybernetics can be traced from the 1940s to the present *The Cybernetic Brain* explores a largely forgotten group of British thinkers including Grey Walter Ross Ashby Gregory Bateson R D Laing Stafford Beer and Gordon Pask and their singular work in a dazzling array of fields Psychiatry engineering management politics music architecture education tantric yoga the Beats and the sixties counterculture all come into play as Pickering follows the history of cybernetics impact on the world from contemporary robotics and complexity theory to the Chilean economy under Salvador Allende What underpins this fascinating history Pickering contends is a shared but unconventional vision of the world as ultimately unknowable a place where genuine novelty is always emerging And thus Pickering avers the history of cybernetics provides us with an imaginative model of open ended experimentation in stark opposition to the modern urge to achieve domination over nature and each other

Technology, Innovation and Creativity in Digital Society Daria Bylieva, Alfred Nordmann, 2021-10-25 This book requires an interdisciplinary understanding of creativity ideal for the formation of a digital public culture Educating students young professionals and future engineers is to develop their capacity for creativity Can creativity be learned With this question the relations of technology and art appear in a new light Especially the notion of progress takes on a new meaning and must be distinguished from innovation The discussion of particular educational approaches the exploration of digital technologies and the presentation of best practice examples conclude the book University teachers show how the teaching of creativity reinforces the teaching of other subjects especially foreign languages **Architecture Beyond Criticism** Wolfgang F. E.

Preiser, Aaron T. Davis, Ashraf M. Salama, Andrea Hardy, 2014-11-27 For the first time this book demonstrates that the two paradigms of architectural criticism and performance evaluation can not only co exist but complement each other in the assessment of built works As architecture takes more principled stances worldwide from environmental sustainability to social cultural and economic activism this book examines the roles of perceived and measured quality in architecture By exploring in tandem both subjective traditional architectural criticism and environmental design and performance evaluation and its objective evaluation criteria the book argues that both methodologies and outcomes can achieve a comprehensive assessment of quality in architecture Curated by a global editorial team the book includes Contributions from international architects and critics based in the UK USA Brazil France Qatar Egypt New Zealand China Japan and Germany Global case studies which illustrate both perspectives addressed by the book and comparative analyses of the findings A six part organization which includes introductions and conclusions from the editors to help guide the reader and further illuminate the contributions By presenting a systematic approach to assessing building performance design professionals will learn how to improve building design and performance with major stakeholders in mind especially end users occupants The Work of Augustus Saint-Gaudens John H. Dryfhout, 2008 Updated catalogue raisonné of one of the most important figures in American sculpture **Electrographic Architecture** Carolyn L. Kane, 2023-08-01 Bridging histories of technology media studies and aesthetics Electrographic Architecture forges a critical narrative of the ways in which illuminated light and color have played key roles in the formation of America's white imaginary Carolyn L Kane charts the rise of the country's urban advertisements light empires and neoclassical buildings in the early twentieth century the midcentury construction of polychromatic electrographic spectacles and their eclipse by informatically intense invisible algorithms at the dawn of the new millennium Drawing on archival research interviews and visual analysis Electrographic Architecture shows how the development of America's electrographic surround runs parallel to a new paradigm of power property and possession *Blake 2.0* Steve Clark, T. Connolly, 2012-01-24 Blake said of his works Tho I call them Mine I know they are not Mine So who owns Blake Blake has always been more than words on a page This volume takes Blake 2.0 as an interactive concept examining digital dissemination of his works and reinvention by artists writers musicians and filmmakers across a variety of twentieth century media **Catalog of the Library of the Museum of Modern Art: Art D - Bom** Museum of Modern Art (New York, N.Y.).
