Targeted alpha particle therapy in oncology Asta Juzeniene, Richard P. Baum, Øyvind Bruland, Roy Larsen, 2023-03-30

Advances in brain disorders: From mechanisms to therapeutic targets Arianna Bellucci, Federica Bono, Sara Anna Bonini, Maria Jose Sisalli, Giulia Abate, 2023-12-20 *Targeted Radionuclide Therapy* Tod W. Speer, 2012-03-28

Radioimmunotherapy also known as systemic targeted radiation therapy uses antibodies antibody fragments or compounds as carriers to guide radiation to the targets It is a topic rapidly increasing in importance and success in treatment of cancer patients This book represents a comprehensive amalgamation of the radiation physics chemistry radiobiology tumor models and clinical data for targeted radionuclide therapy It outlines the current challenges and provides a glimpse at future directions With significant advances in cell biology and molecular engineering many targeting constructs are now available that will safely deliver these highly cytotoxic radionuclides in a targeted fashion A companion website includes the full text and an image bank Targeted Radionuclide Tumor Therapy Torgny Stigbrand, Jorgen Carlsson, Gregory P.

Adams, 2008-09-01 The last three decades have provided opportunities to explore the potential of treating malignant diseases with antibodies or other targeting molecules labelled with nuclides While considerable advances have been reported there is still a significant amount of work left to accomplish before our ambitions can be achieved It now seems timely to review the accomplishments achieved to date and to clarify the challenges that remain The choice of radionuclide the conjugation procedure employed and the selection of suitable targets were early issues that were faced by our field that still persist however we can now tackle these obstacles with significantly better insight The expanding array of new targeting molecules recombinant antibodies peptides and agents based upon alternate scaffolds may increase the therapeutic efficacy or even modify the radiation sensitivity of the targeted tumor cell The title of this book *Targeted Radionuclide Tumour Therapy Biological Aspects* was selected to reinforce the concept that a major focus of this volume was devoted to understanding the biological effects of targeting and radiation These important issues have not previously been the primary focus in this context Furthermore our rapidly expanding knowledge of different types of cell death and the increasingly likely existence of cancer stem cells suggests to us that even more efficient approaches in targeting might be possible in the future Concepts and Misconceptions of Drug Targeting Karel Petrak, 2020-08-05 Precision medicine requires precision drugs that match the needs of individual patients An ideal drug popularly referred to as the magic bullet should be effective without causing any unwanted side effects To do this drugs must act solely on the target of the disease Despite major efforts in this area over some 50 years the currently available drugs are far from being ideal This book summarizes the key requirements for developing precision drugs and offers a new paradigm for site specific drug delivery As such it will be of interest to personnel involved in drug development at pharmaceutical and biotech companies and academic institutions *Clinical Applications of Nuclear Medicine Targeted Therapy* Emilio Bombardieri, Ettore Seregini, Laura Evangelista, Carlo Chiesa, Arturo

radiopharmaceutical therapy RPT is emerging as an innovative approach for treating a wide range of cancers. Almost all radionuclides used in RPT emit photons that can be imaged, enabling non-invasive visualization of the therapeutic agent's biodistribution. The remarkable potential of radiopharmaceutical therapy is now being recognized with recent FDA approval of several RPT drugs and a significant number of drug candidates in clinical development. This book offers a comprehensive perspective on the different technologies and addresses the critical challenges in developing and commercializing radiopharmaceuticals. It covers various topics from clinical applications to specific radiopharmaceutical biodistribution, dosimetry, and novel targets in oncology. The chapters provide a cohesive picture of the advances in SPECT, CT, and PET/CT imaging, clinical trends in targeted therapies utilizing radioisotopes for cancer imaging, and clinical applications of radiotracers within oncology areas. It also delves into the manufacturing technologies and regulatory and supply logistics required to support the development of the next wave of targeted alpha therapies. This resource is ideal for postgraduates and researchers in drug discovery and development in radionuclide therapy and imaging in cancer, as well as medical professionals engaged in nuclear medicine and radiology.

Nuclear Medicine Therapy Cumali Aktolun, Stanley J. Goldsmith, 2012-08-31. *Nuclear Medicine Therapy* presents the state of the art in targeted radionuclide therapy both in clinical practice and contemporary clinical investigation and trials. With contributions from an internationally distinguished group of physicians and scientists, the book is devoted entirely to the use of nuclear medicine techniques and technology for therapy of malignant and benign diseases. Individual chapters cover the scientific principles and clinical applications of radionuclide therapy and the state of clinical trials of agents currently under investigation in the therapy of tumors involving virtually every organ system. Due to overlapping interest in techniques, indications, and clinical use, the development of radionuclide therapy attracts considerable input from other medical specialists whose collaboration is essential, including radiation and medical oncologists, hematologists, diagnostic radiologists, hepatologists, endocrinologists, and rheumatologists. And because radionuclide therapy is a rapidly evolving field of nuclear medicine, it is the aim of this volume to appeal to all specialists involved in targeted radionuclide therapy and to contribute to the standardization of the practice globally.

Cancer is a complex adaptive dynamic system that causes both local and systemic failures in the patient Cancer is caused by a number of gain of function and loss of function events that lead to cells proliferating without control by the host organism over time In cancer the immune system modulates cancer cell population heterogeneity and plays a crucial role in disease outcomes The immune system itself also generates multiple clones of different cell types with some clones proliferating quickly and maturing into effector cells By creating regulatory signals and their networks and generating effector cells and molecules the immune system recognizes and kills abnormal cells Anti cancer immune mechanisms are realized as multi layer nonlinear cellular and molecular interactions A number of factors determine the outcome of immune system tumor interactions including cancer associated antigens immune cells and host organisms
