general linear model or ANCOVA in R and WinBUGS It introduces generalized linear model GLM i.e the extension of the normal linear model to allow error distributions other than the normal The GLM is then extended contain additional sources of random variation to become a generalized linear mixed model GLMM for a Poisson example and for a binomial example The final two chapters showcase two fairly novel and nonstandard versions of a GLMM The first is the site occupancy model for species distributions the second is the binomial or N mixture model for estimation and modeling of abundance Introduction to the essential theories of key models used by ecologists Complete juxtaposition of classical analyses in R and Bayesian analysis of the same models in WinBUGS Provides every detail of R and WinBUGS code required to conduct all analyses Companion Web Appendix that contains all code contained in the book and additional material including more code and solutions to exercises [Catalog of Copyright Entries, Third Series](#) Library of Congress.
