SWOT analysis,

Desert Locust Management,

strategy,

Egypt.

ABSTRACT

The main objective of the SWOT analysis method for Desert Locust Management in Egypt to develop a new future strategic vision for its development through the following factors: Determine strengths and weaknesses in internal environmental factors, Identification of points of opportunity and threats in external environmental factors. In order to accomplish this, reliance was made on Locust Management bases and Desert Locust Research Centre, a work group has also been formed for environmental analysis in the internal and external environment, about 73 individuals distributed to experts involved in the field of research, the results show that the most important strengths of Locust Management in Egypt are: The presence of trained technical and research cadres in the Locust Operations Management, and the existence of the contingency plan for emergency intervention. Whereas one of the most important weaknesses was the lack of concern about the size of the problem and the real estimate of Locust numbers and their size, that led to accelerate the worsening of the crisis. Lack of awareness to deal with Locust swarms leads to their dispersal, which is difficult to deal with, also inadequate materials and untrained additional human resources in cases of upsurges and invasions. The results also showed the most important points of opportunity: encouraging the training system to raise the efficiency of staff from other departments, the Locust Control Commission, Regional and International Commissions and donor communities are interested in achieving sustainable development and preserving agricultural crops, benefiting from the experiences of successful countries in the fields of Locust Management. While one of the most important threatening point are: Political unrest in neighbouring countries makes it difficult for survey and control operations especially along the bordering areas, Climate changes and its negative effects in changing the Locust distribution map in Egypt, The inflexibility of the regulations and laws of cooperation between Egypt and the countries of Locusts breeding and invasion for different causes, especially with neighbouring countries. The study, through the analysis of the SWOT matrix, found the most important policies to develop the performance of Desert Locust Management in Egypt in the following: to benefit from the experiences of successful countries in the fields of Locust Management by collaborating with the Commission for Controlling the Desert Locust in the Central Region to provide information, technical and financial support to the Locust Management, based on the experiences of these countries, A real estimate of the scale of the problem and Locust infections and the raising of sufficient awareness of citizens to deal with swarms, which reduces the worsening of the crisis, encourage the training system to compensate the inefficiency and inadequate staff and additional teams from other departments to cope with upsurges and invasions, and developing an extension programs for citizens' dealings with Locust swarms, especially in areas of horizontal expansion in agriculture or areas where Locusts are expected to be present as a result of climate changes. The study proposes a new vision for the development of the General Department for Locust Affairs in Egypt and its efficiency in serving the agricultural sector to contribute to food security and sustainable agricultural development.
