Molecular Biology of Aging Avril D. Woodhead, Anthony D. Blackett, Alexander Hollaender, 1985-10-31 It is delightful but humbling to find my face at the start of these Proceedings there are innumerable other faces which could equally well stand there from among the band who have fore gathered at every gerontology conference since the subject was launched in its present form but I deeply appreciate being there Gerontology d id not grow by accident Its present standing is the fruit of careful planning undertaken by European and American scientists back in the 1950 s In those days it was still a fringe science and the conspirators had much the standing of the 1920 s Interplanetary Society The United States itself is the offspring of conspiracy for when the results of conspiracy are beneficent the conspirators become Founding Fathers This has been the case with gerontology The present meeting is especially gratifying because the papers have been recitals of normal hard science investigation We had to get through the rigors of a long period of semantic argument and a long period of one shot general theories before this kind of meeting normal in all other research fields could take place It was also necessary to breed in the menagerie a generation of excellent investigators aware of the theoretical background but unintimidated by it who share our conviction that human aging is comprehensible and probably controllable and who go into the laboratory to attack specifics

Cognitive and Behavioral Performance Factors in Atypical Aging Mark L. Howe, Michael J. Stones, Charles J. Brainerd, 2012-12-06 It is a truism that as we age there are a number of underlying physiological changes conspiring to alter our level of behavioral and cognitive function ing Despite the inherent interrelatedness of these behavioral and cognitive changes all too often the papers we read confine themselves to specific isolated components of the developing process Although exceptions nat urally exist we believe that these exceptions should become rule Although an integrated approach is important in all areas of adult devel opment it is perhaps particularly germane in the study of atypical aging Here

changes in overall functioning can occur in rapid succession with the synchrony of decline between different subprocesses making it difficult to factor changes in one process from changes in another For example because changes in cognitive functioning co occur with other dramatic changes in motoric response capacities it is unclear how one can effectively study changes in the ability to cognize independent of changes in the very mechanisms ability to execute motor sequences so often used to index cognitive performance

National Library of Medicine (U.S.),1984 Biomedical Index to PHS-supported Research ,1993 **Aging and Cognitive Processes** Fergus Craik,2012-12-06 For a variety of reasons there has been an explosion of interest in research on aging over the past few years The reasons include an awareness that a large and growing proportion of our popUlation is over 65 and that research findings can contribute to their health satisfaction and efficiency as members of society the fact that funding agencies have endorsed the need for more research effort in the area by setting up special programs and also the fact that researchers themselves are turning more to practical problems as many theoretical issues in experimen tal psychology at least seem to remain as intractable as ever Thus at present there is widespread interest in aging but there is also a lack of knowledge as to what has already been accomplished in the area what the theoretical issues are and what factors contribute to the methodological and practical difficulties The time is propitious for meetings of experts in various aspects of the aging process both to discuss among themselves latest advances in the field and also to inte grate known information for researchers and practitioners In the summer of 1980 we organized such a meeting as the 10th annual psychology symposium to be held at the Erindale Campus of the University of Toronto The topic chosen was Aging and Cognitive Processes and the edited contributions to the symposium form the chapters of the present book Metabolic and Vascular Imaging Biomarkers for Brain Aging and Alzheimer's Disease Ai-Ling Lin,Albert Gjedde,Fahmeed Hyder,2020-08-10
