The Inner Bird Gary W. Kaiser, 2010-10-01 Birds are among the most successful vertebrates on Earth An important part of our natural environment and deeply embedded in our culture birds are studied by more professional ornithologists and enjoyed by more amateur enthusiasts than ever before However both amateurs and professionals typically focus on birds behaviour and appearance and only superficially understand the characteristics that make birds so unique The Inner Bird introduces readers to the avian skeleton then moves beyond anatomy to discuss the relationships between birds and dinosaurs and other early ancestors Gary Kaiser examines the challenges scientists face in understanding avian evolution even recent advances in biomolecular genetics have failed to provide a clear evolutionary story Using examples from recently discovered fossils of birds and near birds Kaiser describes an avian history based on the gradual abandonment of dinosaur like characteristics and the related acquisition of avian characteristics such as sophisticated flight techniques and the production of large eggs Such developments have enabled modern birds to invade the oceans and to exploit habitats that excluded dinosaurs for millions of years While ornithology is a complex discipline that draws on many fields it is nevertheless burdened with obsolete assumptions and archaic terminology The Inner Bird offers modern interpretations for some of those ideas and links them to more current research It should help anyone interested in birds to bridge the gap between long dead fossils and the challenges faced by living species

Nakagoshi, Jhonamie A. Mabuhay, 2014-05-09 This book focuses on three major means of achieving a low carbon society conservation of the ecosystem complex changes of arrangement of landscapes and creation of biodiversity There are specific countermeasures to be taken for carbon absorption in the three types of landscapes urban cultural and natural because their carbon balances differ Urban landscapes are promising sites because they have the potential for greening and the creation of biodiversity Cultural landscapes in the tropics had not been actively researched until recently but this book now presents a collection of several cases focused on those areas Natural landscapes had existed in abundance in developing countries later nature protection areas were designated to coexist with development Now however developmental pressure has penetrated into those nature protection areas and landscape ecological projects are urgently required to preserve them As a result of global warming abnormal weather phenomena including super typhoons have occurred frequently in recent years The major underlying cause is the higher concentration of greenhouse gases released by human activities As well major natural absorbers of CO₂ such as forests wetlands and coral reefs are shrinking and the human impact is causing the ecological balance to deteriorate Controlling CO₂ emissions and expanding the CO₂ absorbers are keys to reducing total CO₂ Low carbon societies can be established by maintaining the original CO₂ balance through integration of multiple tools with contributions from diverse fields such as physics and chemistry physiology and humanities and education On the basis of an international consensus the environment must be protected no matter what sacrifices are required As this book demonstrates achieving a low carbon society is a top priority and landscape conservation is the first step in ecological research toward that goal
