Karin Pargfrieder,2002-05-30 Inhaltsangabe Abstract Conventional workflow management focuses on improving the
efficiency of business processes within one organization However processes should not only be supported within the
enterprise but also when crossing organizational boundaries e g in order to support new forms of collaborations as virtual
enterprises Due to the different nature of interorganizational workflows conventional workflow technology cannot be directly
applied The most important requirement specific to interorganizational workflow systems is obviously that they are able to
deal with heterogeneity and that it is not too expensive to achieve interoperability Also maintaining the privacy of internal
processes is a major concern and security issues should be addressed This diploma thesis gives an introduction to
conventional and interorganizational workflow management their aspects and concepts It elaborates the requirements
relevant for interorganizational workflow systems describes the most important approaches projects and initiatives that
currently exist in the area of interorganizational workflows including XML based approaches the standards of the WfMC
electronic marketplaces and electronic contracting An evaluation of these approaches based on criteria derived from the
requirements and other characteristics shows the differing strengths and weaknesses The XML based approaches provide
standards for the process interfaces and can cope with heterogeneous environments very well Some of them even allow
spontaneous commerce with new trading partners without custom integration Traditional EDI is in principle similar but has
many disadvantages The standards of the WfMC enable integration with a very low effort if they are followed by software

providers But privacy and security are potential problem areas and the models of interoperability that realistically can be supported are simple Electronic marketplaces and electronic contracting are ideal if a high number of business partners has to be supported and the services are chosen dynamically depending on the situation But these services have to be comparable with rather simple interfaces Inhaltsverzeichnis Table of Contents 1 Introduction1 2 Workflow Management4 2 1Requirements on WfMSs6 2 2Workflow Modeling8 2 2 1The Functional Aspect Workflows and Activities8 2 2 2The Operational Aspect Applications9 2 2 3The Behavioral Aspect Control Flow10 2 2 4The Informational
