## **Alzheimers Dementia Dilemmas In Clinical Research:**

Alzheimer's Dementia Vijaya L. Melnick, Nancy N. Dubler, 2012-12-06 The National Institute on Aging NIA has historically been concerned with the protection of human subjects In July 1977 the NIA sponsored a meeting to update and supplement guide lines for protecting those participating in Federal research projects Although the basic guidelines had been in effect since 1966 it had been neglected to include the elderly as a vulnerable population In November 1981 the NIA organized a conference on the ethical and legal issues related to informed consent in senile dementia cases The present volume offers the latest and best thinking on Alzheimer s Dementia to have emerged from the dialog that was first embarked upon at the NIA meeting Indeed the issues and concerns it treats now seem even more relevant than they appeared historically because of the vastly greater awareness in the community of the entire spectrum of problems Alzheimer s disease confronts us all with Our interest and concern is both humanitarian and self serving Clearly older people must be protected from inappropriate research and careful attention must be paid to the circumstances under which research is conducted on those older persons who have given anything less than full consent It is equally necessary however for the research enterprise to be protected so that today s elderly and those of the future can benefit from the fruits of research *Clinical Diagnosis and Management of Alzheimer's Disease, Second Edition* Serge Gauthier, 2000-11-14 Owing to the success of the first edition and the rapid development of new drugs for treating Alzheimer s disease Serge Gauthier has approached not only his original contributors but a number of leading clinicians and researchers to give their views based on clinical experience and scientific evidence for the treatment of this disease Special Care Units for People with Alzheimer's and Other Dementias ,1992 Overview and policy implications Nursing home residents with dementia characteristics and problems Special care units for people with dementia findings from descriptive and from evaluative studies Regulations and guidelines for special care units Regulations and interpretations of regulations that interfere with the design and operation of special care units Preclinical and clinical issues in Alzheimer's disease drug research and development Cesare Mancuso, Silvana Gaetani, 2015-03-03 Alzheimer s disease AD is a chronic neurodegenerative disorder characterized by progressive cognitive dysfunction and memory loss inability to perform the activities of daily living and mood disorders According to the so called amyloid cascade hypothesis amyloid peptide A produced by beta and gamma secretase mediated cleavages of the amyloid precursor protein APP plays a pivotal role in the pathogenesis of AD A was also shown to contribute to AD pathology by stimulating the hyperphosphorylation of tau which is responsible for the formation of neurofibrillary tangles However the amyloid cascade hypothesis was challenged by other theories which lend support to the idea that A is not causative but can be considered as an innocent bystander in AD Although preclinical research generated impressive lines of evidence about the several intracellular mechanisms whose impairment leads to the onset and progression of AD clinical research aimed at the development of new drugs capable of preventing or delaying the onset of neuronal damage in AD patients has produced

limited results The drugs currently available for the treatment of AD are acetylcholinesterase inhibitors AChEI and the NMDA glutamate receptor antagonist memantine The AChEI increase acetylcholine levels in the synaptic cleft which are reduced because of the progressive damage of cholinergic neurons in cognitive brain areas e g amygdala hippocampus and frontal cortex whereas memantine is used to prevent reduce calcium dependent excitotoxic neuronal cell death Both classes of drugs have been shown to improve symptoms related to cognitive decline but their effects are confined largely to patients with mild to moderate AD in particular during the first year or so of treatment An alternative to this symptomatic treatments involves the use of drugs that intervene in the pathogenesis of the disease Recently monoclonal antibodies against A were proposed as novel agents capable to remove A from the brain thus preventing neuronal damage The research topic focuses on the preclinical and clinical evidence about the several factors that contribute to the pathogenesis of AD as well as the potential therapeutic role of new classes of drugs still under preclinical or clinical development
