Catalog of Washington Seabird Colonies Steven M. Speich, Terence R. Wahl, 1989 **The North American Sea Ducks** Paul Johnsgard, 2016-11-09 The 21 species of sea ducks are one of the larger subgroups Tribe Mergini of the waterfowl family Anatidae and the 16 species one historically extinct that are native to North America represent the largest number to be found on any continent and also the largest number of endemic sea duck species native to any continent. Although generally not important as game birds the sea ducks include some economically important birds such as the eiders the basis for the Arctic eiderdown industry and a historically important food source for some Native American cultures. They also include what is probably the most northerly breeding species of all waterfowl and an icon of Arctic bird life the long tailed duck. The sea ducks also include species having some of the most complex and diverse pair forming postural and acoustic displays of all waterfowl goldeneyes and bufflehead and some of the deepest diving species of all waterfowl scoters and long tailed duck. Sea ducks are highly prone to population disasters caused by oil spills and other water contaminants and like other seabirds are among the first bird groups that are being affected by current global warming trends in polar regions. This book is an effort to summarize succinctly our current knowledge of sea duck biology and to provide a convenient survey of the vast technical literature on the group with over 900 literature references. It also includes 90 000 words of text more than 40 percent of which is new 15 updated range maps 11 black white and 20 color photographs over 30 ink drawings and nearly 150 sketches. Lastly the North American sea ducks include the now extinct Labrador duck the only northern hemisphere waterfowl species to have gone extinct in modern times. I have gratefully reprinted a Labrador duck watercolor by Sir Peter Scott. Considering recent population crashes in other sea ducks such as the Steller s eider and spectacled eider it should also offer a sobering reminder of the fragility of our natural world and its inhabitants including us. **An Ecological Characterization of the Pacific Northwest Coastal Region** , 1980 **Elliot Bay Small Craft Harbor** , 1987

Biological Report , 1988 **Where to Watch Birds in World Cities** Paul Milne, 2006 An indispensable book for traveling bird enthusiasts who find themselves in a foreign city with a little free time. This is the first birder s guide to sixty cities of the world. Designed and written for the bird enthusiast who is traveling for reasons other than birding on business with family for academic conferences the book offers assistance in locating birds identifying local bird residents and using public transportation. *Where to Watch Birds in World Cities* deserves a permanent place in the suitcase or briefcase of anyone who would like to make the most of limited time in an unfamiliar city by learning about the local birds. Entries for each of the sixty cities provide an introduction to the city and detailed information on major bird watching sites including lists of typical summer and winter bird residents and migrants and directions for getting to the sites using public transportation. The book is illustrated throughout with maps and attractive line drawings. In no way a replacement for detailed guides to specific cities or regions this book instead fills an important gap for travelers whose birding though done on short notice can nevertheless

prove delightful Some cities included in this guide Milan Toronto Mexico City Tokyo Los Angeles Taipei Lima Singapore
