DISC the International Symposium on Distributed Computing is an annual forum for research presentations on all facets of distributed computing. This volume includes 23 contributed papers and an invited lecture all presented at DISC 99 held on September 27-29, 1999 in Bratislava, Slovak Republic. In addition to regular submissions, the call for papers for DISC 99 also solicited Brief Announcements (BAs). We received 60 regular submissions and 15 brief announcement submissions. These were read and evaluated by the program committee with the additional help of external reviewers when needed. At the program committee meeting on June 10-11 at Dartmouth College, Hanover, USA, 23 regular submissions and 4 BAs were selected for presentation at DISC 99. The extended abstracts of these 23 regular papers appear in this volume, while the four BAs appear as a special publication of Comenius University Bratislava, the host of DISC 99. It is expected that the regular papers will be submitted later in more polished form to fully refereed scientific journals. Of the 23 regular papers selected for the conference, 12 qualified for the Best Student Paper award. The program committee awarded this honor to the paper entitled "Revisiting the Weakest Failure Detector for Uniform Reliable Broadcast" by Marcos Aguilera, Sam Toueg, and Borislav Deianov. Marcos and Borislav, who are both students, share this award.

People volunteer their time and energy and work in a dedicated fashion to pull everything together each year, including our very supportive Steering Committee members led by Sukumar Ghosh. However, the success of ICDCN is mainly due to the hard work of all those people who submit papers and/or attend the conference. We thank you all!

Message from the Technical Program Chairs: Welcome to the proceedings of the 10th International Conference on Distributed Computing and Networking (ICDCN 2009). As ICDCN celebrates its 10th anniversary, it has become an important forum for disseminating the latest research results in distributed computing and networking. We received 179 submissions from all over the world, including Algeria, Australia, Canada, China, Egypt, France, Germany, Hong Kong, Iran, Italy, Japan, Malaysia, The Netherlands, Poland, Singapore, South Korea, Taiwan, and the USA, besides India, the host country. The submissions were read and evaluated by the Program Committee, which consisted of 25 members for the Distributed

Computing Track and 28 members for the Networking Track with the additional help of external reviewers The Program Committee selected 20 regular papers and 32 short papers for inclusion in the proceedings and presentation at the conference We were fortunate to have several distinguished scientists as keynote speakers Andrew Campbell Dartmouth College USA Maurice Herlihy Brown University USA and P R Kumar University of Illinois Urbana Champaign delivered the keynote address Krithi Ramamritham from IIT Bombay India delivered the A K Choudhury Memorial talk Dependable Computing Rogério le Lemos,Taisy Silva Weber,Joao Batista Camargo Jr.,2003-10-02 This book constitutes the refereed proceedings of the First Latin American Symposium on Dependable Computing LADC 2003 held in Sao Paulo Brazil in October 2003 The 21 revised full papers presented together with abstracts of invited talks a panel workshops and tutorials were carefully reviewed and selected for presentation The papers are organized in topical sections on fault injection security adaptive fault tolerance distributed algorithms and components and fault tolerance **High Performance Computing - HiPC 2000** Mateo Valero,Viktor K. those hardware components The freedom she he now has is tremendously challenging The problems alas have increased too What was before mastered and tested carefully before a fully fledged mainframe or a closely coupled computer cluster came out on the market is today left to the responsibility of computer engineers and scientists invested in the role of system architects who fulfil this role on behalf of software vendors and integrators add value system developers R D institutes and final users As system complexity size and diversity grow so increases the probability of inconsistency unreliability non responsiveness and insecurity not to mention the management overhead What System Architects Need to Know The insight such an architect must have includes but goes well beyond the functional properties of distributed systems

Advances in Distributed Systems Sacha Krakowiak,Santosh Shrivastava,2003-06-26 In 1992 we initiated a research project on large scale distributed computing systems LSDCS It was a collaborative project involving research institutes and universities in Bologna Grenoble Lausanne Lisbon Rennes Rocquencourt Newcastle and Twente The World Wide Web had recently been developed at CERN but its use was not yet as common place as it is today and graphical browsers had yet to be developed It was clear to us and to just about everyone else that LSDCS comprising several thousands to millions of individual computer systems nodes would be coming into existence as a consequence both of technological advances and the demands placed by applications We were excited about the problems of building large distributed systems and felt that serious rethinking of many of the existing computational paradigms algorithms and structuring principles for distributed computing was called for In our research proposal we summarized the problem domain as follows We expect LSDCS to exhibit great diversity of node and communications capability Nodes will range from mobile laptop computers workstations to supercomputers Whereas mobile computers may well have unreliable low bandwidth communications to the rest of the system other parts of the system may well possess high bandwidth communications capability To appreciate the problems posed by the sheer scale of a system comprising thousands of nodes we observe that such systems will be rarely functioning in their entirety

Software Design for Resilient Computer Systems Igor Schagaev,Jürg Gutknecht,2024-07-15 This book addresses the question of how system software should be designed to account for faults and which fault tolerance features should provide for highest reliability With this third edition of Software Design for Resilient Computer Systems the book is thoroughly updated to contain the newest advice regarding software resilience With a new introductory chapter the new edition is ideal for researchers and industry professionals In the book the authors first show how system software interacts with the hardware to tolerate faults They analyze and further develop the theory of fault tolerance to understand the diverse ways to increase the reliability of a system with special attention on the role of system software in this process They introduce the theory of redundancy and its use for construction of a subsystem through generalised algorithm of fault tolerance GAFT and apply it to distributed systems The book s approach is applied to various hardware subsystems different structures of RAM and processor cores and demonstrates exceptional performance reliability and energy efficiency This third edition devotes

substantial attention to system software for modern computers including run time systems supporting algorithms of recovery and their analysis language aspects and ways to improve reconfigurable and parallel computing Due to the wide reaching nature of the content this book applies to a host of industries and research areas including military aviation intensive health care industrial control and space exploration

Networked Group Communication Luigi Rizzo, Serge Fdida, 2004-06-22 Enabling group communication is one of the major challenges for the future Internet Various issues ranging from services and applications to protocols and infrastructure have to be addressed Moreover they need to be studied from various angles and therefore involve skills in multiple areas

COST264 was created to contribute to this international effort towards group communication and related technologies The

European COST framework is ideal for establishing a new community of interest providing an open forum for ideas and also supporting young researchers in the field. The COST264 action officially started in late 1998 aims at leveraging the European research in this area and creating intensive interaction at the international level. To this purpose COST264 decided to organize an annual technical workshop. The International Workshop on Networked Group Communication NGC 99 in Pisa is the first event of the series. Despite this being the first workshop and despite the very short time between the Call for Papers and the deadline for submissions and the other conflicting and more established events, the Call for Papers of NGC 99 was highly successful: we received 49 papers of which 18 were selected to compose the basis of the technical program. We hope you will enjoy our paper selection which is the VI Preface core of these proceedings and addresses important issues in the research and development of networked group communication. In addition to refereed contributions we scheduled two keynote speakers: Christophe Diot and Steve Deering and four invited talks by Ken Birman (Cornell), Bob Briscoe (BT), Radia Perlman (SUN), and Tony Speakman (Cisco).
