Advances in Communication Control Networks Sophie Tarbouriech, Chaouki T. Abdallah, John Chiasson, 2004-09-22
The area of communication and computer networks has become a very active field of research by the control systems community in the last years. Tools from convex optimization and control theory are playing increasing roles in efficient network utilization, fair resource allocation and communication delay accommodation and the field of Networked Control systems is fast becoming a mainstay of control systems research and applications. This carefully edited book brings together solicited contributions from experts in the various areas of communication control networks referring to both networks under control, control in networks as well as networked control systems, control over networks. The aim of this book is to reverse the trend of fragmentation and specialization in Communication Control Networks, connecting various interdisciplinary research fields including control, communication, applied mathematics and computer science.

Information Networking Ilyoung Chong, 2002-09-18
The papers comprising Vol I and Vol II were prepared for and presented at the International Conference on Information Networking 2002 (ICOIN 2002) which was held from January 30 to February 1, 2002 at Cheju Island, Korea. It was organized by the KISS (Korean Information Science Society), SIGIN in Korea, IPSJ SIG DPE (Distributed Processing Systems) in Japan, the ITRI (Industrial Technology Research Institute) and National Taiwan University in Taiwan. The papers were selected through two steps: refereeing and presentation review. We selected for the theme of the conference the motto "One World of Information Networking". We did this because we believe that networking will transform the world into one zone in spite of different ages, countries and societies. Networking is in the main stream of everyday life and affects directly millions of people around the world. We are in an era of tremendous excitement for professionals working in many aspects of the converging networking information, retailing, entertainment and publishing companies. Ubiquitous communication and computing technologies are changing the world. Online communities, e-commerce, e-service and distance learning are a few of the consequences of these technologies and advanced networking will develop new applications and technologies with global impact. The goal is the creation of a world-wide distributed computing system that connects people and appliances through wireless and high bandwidth wired channels with a backbone of computers that serve as databases and object servers. Thus Vol I

The metaphor of Ambient Intelligence (AmI) tries to picture a vision of the future where all of us will be surrounded by intelligent electronic environments and this ambient has claims to being sensitive and responsive to our needs. Ambient Intelligence without invasion of privacy represents a long-term vision for the EU Information Society Technologies Research programme. A strong multi-disciplinary and collaborative approach is a key requirement for large-scale technology innovation and the development of effective applications. Up to now, most of the books and papers related to AmI focus their analysis on the technology

potential only An important feature of this volume is the link between the technology through the concepts of ubiquitous computing and intelligent interface and the human experience of interacting in the world through a neuro psychological vision centred on the concept of presence Presence the sense of being there is the experience of projecting one's mind through media to other places people and designed environments The combination of recent discoveries in cognitive neuroscience which make it possible to acquire a better understanding of the human aspects of presence and the breakthroughs at the level of the enabling technologies make it increasingly possible to build novel systems based on this understanding The goal of this volume is to assess the technologies and processes that are behind the AmI vision in order to help the development of state of the art applications More in detail this volume aims at supporting researchers and scientists interested in the understanding and exploiting the potential of AmI

Malcolm,Michael Roe,2005-09-21 Greetings These are the proceedings of the 11th in our series of International Workshops on Security Protocols Our theme this time was Where have all the Protocols gone Once upon a time security protocols lived mainly in the network and transport layers Now they increasingly hide in applications or in specialised hardware Does this trend lead to better security architectures or is it an indication that we are addressing the wrong problems The intention of the workshops is to provide a forum where incompletely worked out ideas can stimulate discussion open up new lines of investigation and suggest more problems The position papers published here have been revised by the authors in the light of their participation in the workshop In addition we publish edited transcripts of some of the discussions to give our readers access to some of the roads ahead not yet taken We hope that these revised position papers and edited transcripts will give you at least one interesting idea of your own to explore Please do write and tell us what it was Our purpose in publishing these proceedings is

to produce a conceptual map which will be of enduring interest rather than to be merely topical This is perhaps just as well given the delay in production This year we moved to new computer based recording technology and of course it failed completely
