Kitalyi, Food and Agriculture Organization of the United Nations,1998-01-01 The poultry production systems of Africa are mainly based on

the scavenging indigenous chickens found in virtually all villages and households in rural Africa. These systems are characterized by low output per bird. Nevertheless, over 70 percent of the poultry products and 20 percent of animal protein intake in most African countries come from this sector. Therefore, increased rural poultry production would result in a positive impact on household food security both in increased dietary intake and in income generation. This study coincided with the World Food Summit held at FAO Rome from 13 to 17 November 1996, where delegations committed their governments and civil society to a global attack on food insecurity and poverty. Poultry, like other short cycle animal stock, is viewed by the FAO Special Programme for Food Security (SPFS) as a crucial element in the struggle for sustained food production and poverty alleviation. The guidelines provided in this study are particularly pertinent to those countries participating in the SPFS, where village chicken production will have a substantial impact on increased household food security and gender equity.

Backyard Poultry Medicine and Surgery Cheryl B. Greenacre, Teresa Y. Morishita, 2014-12-31. *Backyard Poultry Medicine and Surgery* is a practical resource offering guidance on developing diagnostic and treatment plans for individual companion poultry or small flocks. Organized by body system to aid in developing a differential diagnosis list for common presenting signs, the book provides all the information clinicians need to effectively treat backyard poultry. Written by experts from both the commercial poultry field and the companion avian field, the book provides thorough coverage of both common and less common diseases of backyard chickens, ducks, and other poultry. The book begins with introductory chapters covering general information, an overview of US laws, and basic husbandry concerns, then moves into specific disease chapters organized by system. The book takes an individual medicine perspective throughout, with photographs, radiographs, and histopathological photomicrographs to illustrate principles and diseases. *Backyard Poultry Medicine and Surgery* is an invaluable guide to diseases and treatments for any practitioners treating backyard poultry.

Integrated Organic Farming Systems: Approach for Efficient Food Production and Environmental Sustainability Subhash Babu, Sanjay Singh Rathore, Vinod Kumar Singh, Raghavendra Singh, 2023-10-24. Researchers and policy planners are in search of a solution to address the twin challenges of maximizing agricultural production while maintaining/improving ecosystem sustainability. Enhancing farm productivity is needed in certain regions of the world to satisfy local food consumption and farmers' needs. Linear economy-based input-intensive conventional agriculture (CAPS) has increased production output but has not made agriculture more sustainable. Henceforth, a farming system that aims to reduce the adverse impact on the environment as well as enhance agricultural productivity by reducing environmental footprint and improving soil health and economic wellbeing is needed in the present day. Integrated organic farming systems (IOFS) involve residue recycling, bio-intensive cropping, high-tech horticulture, mushroom, dairy, poultry, fishery, apiculture, etc., can improve the ecosystem health and augment the income and livelihood security of the growers. Worldwide IOFS are gaining popularity due to improved ecosystem services and improving

farm productivity and livelihood security Hence IOFS a circular economy based reuse recycle repair agricultural production system can be alternatives to energy intensive inputs based on CAPS Hence there is an urgent need to select suitable IOFS models with proper resource optimization for productivity maximization and better ecosystem sustainability Undoubtedly IOFS reduces energy use from synthetic agrochemicals but food production in IOFS is highly dependent on fossil fuel energy that must be addressed urgently Despite the enormous positive outlooks there are several challenges in the adoption of IOFS models The IOFS is a multiproduct oriented production system that needs multi specialties and marketing Capacity building and infrastructure development are also great challenges in adopting IOFS Moreover the development of IOFS models is highly individualistic and location specific production systems need proper resource optimization and characterization Hence the development of site specific IOFS models to maintain food quality with productivity improvement is a genuine issue to the researchers which needs to be addressed Papers original research review letter to the editors spanning across the discipline related to the IOFS development in sustainable ways are encouraged for inclusion in this research topic Papers should explicitly cover ecosystem restoration farm productivity and profitability and could have a specific focus on the following areas the IOFS models for enhancing productivity and environmental quality through an integrated management approach aiming at the maximization of use efficiencies the management of biomass waste to restore the soil fertility and ecosystem services the effect of integrated management practices on greenhouse gas emissions and energy use Critical approaches for climate smart food production systems
