Bachelard Science And Objectivity:

Bachelard: Science and Objectivity Mary Tiles, 1984-12-06 This is the first critically evaluative study of Gaston Bachelard's philosophy of science to be written in English. Bachelard's professional reputation was based on his philosophy of science, though that aspect of his thought has tended to be neglected by his English speaking readers. Dr Tiles concentrates here on Bachelard's critique of scientific knowledge. Bachelard emphasised discontinuities in the history of science, in particular he stressed the ways of thinking about and investigating the world to be found in modern science. This, as the author shows, is paralleled by those debates among English speaking philosophers about the rationality of science and the incommensurability of different theories. To these problems Bachelard might be taken as offering an original solution rather than see discontinuities as a threat to the objectivity of science; see them as products of the rational advancement of scientific knowledge. Dr Tiles sets out Bachelard's views and critically assesses them, reflecting also on the wider question of how one might assess potentially incommensurable positions in the philosophy of science as well as in science itself.

Bachelard: Science and Objectivity Mary Tiles, 1984-12-06 Concentrates on Bachelard's central critique of scientific knowledge. Reveals that his concern with discontinuities in the history of science is in accord with recent debates about the nature of rationality and the incommensurability of different scientific theories.

The Formation of the Scientific Mind Gaston Bachelard, 2002 Gaston Bachelard is one of the indispensable figures in the history of 20th century ideas. The broad scope of his work has had a lasting impact in several fields: notable philosophy, architecture and literature.

Gaston Bachelard Cristina Chimisso, 2013-12-16 In this new study Cristina Chimisso explores the work of the French Philosopher of Science Gaston Bachelard 1884-1962 by situating it within French cultural life of the first half of the century. The book is introduced by a study based on an analysis of portraits and literary representations of how Bachelard's admirers transformed him into the mythical image of the Philosopher, the Patriarch and the Teacher of Happiness. Such a projected image is contrasted with Bachelard's own conception of philosophy and his personal pedagogical and moral ideas. This pedagogical orientation is a major feature of Bachelard's texts and one which deepens our understanding of the main philosophical arguments. The primary thesis of the book is based on the examination of the French educational system of the time and of French philosophy taught in schools and conceived by contemporary philosophers. This approach also helps to explain Bachelard's reception of psychoanalysis and his mastery of modern literature. *Gaston Bachelard: Critic of Science and the Imagination* thus allows for a new reading of Bachelard's body of work whilst at the same time providing an insight into twentieth century French culture.

Michel Foucault's Archaeology of Scientific Reason Gary Gutting, 1989-09-29 An introduction to the critical interpretation of the work of Michael Foucault.

Gaston Bachelard, Revised and Updated Roch C. Smith, 2016-06-03 Gaston Bachelard, one of twentieth century France's most original thinkers, is known by English language readers primarily as the author of *The Poetics of Space* and several other books on the imagination, but he made significant contributions to the

philosophy and history of science In this book Roch C Smith provides a comprehensive introduction to Bachelard's work demonstrating how his writings on the literary imagination can be better understood in the context of his exploration of how knowledge works in science After an overview of Bachelard's writings on the scientific mind as it was transformed by relativity quantum physics and modern chemistry Smith examines Bachelard's works on the imagination in light of particular intellectual values Bachelard derived from science His trajectory from science to a specifically literary imagination is traced by recognizing his concern with what science teaches about how we know and his increasing preoccupation with questions of being when dealing with poetic imagery Smith also explores the material and dynamic imagination associated with the four elements fire water air and earth and the phenomenology of creative imagination in Bachelard's *Poetics of Space* his *Poetics of Reverie* and in the fragments of *Poetics of Fire*

Reconsidering Historical Epistemology Matteo Vagelli, 2024-06-27 This book explores the key conceptual stakes underpinning historical epistemology The strong Anglophone interest in historical epistemology since at least the 1990s is typically attributed to its simultaneously philosophical and historical synthetic approach to the study of science Yet this account considered by critics to be an unreflective assumption has prevented historical epistemology from developing a clear understanding and definition especially regarding how precisely historical and philosophical reflections on the sciences should be combined Thus this book uniquely analyses how the problems and tensions inherent to the contemporary phase of historical epistemology can be clarified by reference to the classical French phase The archaeological method of Michel Foucault which draws on and transforms fundamental insights by Gaston Bachelard and Georges Canguilhem is used to exert an enduring influence on the field especially through the work of Ian Hacking and his philosophical cum historical analyses of styles of scientific reasoning Though this book is of great value to academic specialists and graduate students the fact it addresses questions broad in scope ensures it is also relevant to a range of scholars in many disciplines and will provoke discussion among those interested in foundational issues in history and philosophy of science Vagelli's book provides a both unique and uniquely important window into historical epistemology and its relation to contemporary philosophy of science Unique because nowhere else can one find a single work that treats the range of topics that he covers Uniquely important because Vagelli's clear concise and comprehensive survey details key interrelationships among a range of American British and European views currently in play regarding historical epistemology and philosophy of science as well as the institutional and intellectual vectors driving their associated epistemological positions Paul Roth UC Santa Cruz USA Uneasily the history and philosophy of science have bolstered and undermined each other for all too long Would history offer nothing but potted episodes to confirm or contradict transhistorical claims about science Would philosophy dismantle uncritical historicist accounts of scientific discoveries Historical epistemology offers a more integrated path at once a history of the present and a philosophy of the past Matteo Vagelli draws together the insights of the Francophone Anglophone and Germanophone traditions to give us a sparkling lucid account of seeing our standards of

scientific understanding as developing across time always asking how did we come to our standards of demonstration and argument Peter Galison Harvard University USA

Atomistic Intuitions Gaston Bachelard, 2018-08-27 French philosopher Gaston Bachelard 1884 1962 is best known in the English speaking world for his work on poetics and the literary imagination but much of his oeuvre is devoted to epistemology and the philosophy of science Like Thomas Kuhn whose work he anticipates by three decades Bachelard examines the revolution taking place in scientific thought but with particular attention to the philosophical implications of scientific practice *Atomistic Intuitions* published in 1933 considers past atomistic doctrines as a context for proposing a metaphysics for the scientific revolutions of the twentieth century As his subtitle indicates in this book Bachelard proposes a classification of atomistic intuitions as they are transformed over the course of history More than a mere taxonomy this exploration of atomistic doctrines since antiquity proves to be keenly pedagogical leading to an enriched philosophical appreciation of modern subatomic physics and chemistry as sciences of axioms Though focused on philosophy of science the perspectives and intuitions Bachelard garnered through this work provide a unique and even essential key to understanding his extensive writings on the imagination Roch C Smith's translation and explanatory notes will help to make this aspect of Bachelard's thought accessible to a wider readership particularly in such fields as aesthetics literature and history

An Actology of the Given Malcolm Torry, 2023-08-03 An actology introduced by the first book in this series Actology Action Change and Diversity in the Western Philosophical Tradition is a conceptual structure characterized by action change and diversity and that envisages reality as action in changing patterns The previous book in this series Actological Readings in Continental Philosophy reads a number of continental philosophers through this lens This new book An Actology of the Given takes a somewhat different approach it explores the concepts of the gift givenness giving and other cognates in the light of reality understood as action in patterns rather than as beings that change and it does so by discussing some anthropology the writings of a number of continental philosophers biblical texts social policy and a variety of other givens

The Present Situation in the Philosophy of Science Friedrich Stadler, 2010-05-19 This volume is a serious attempt to open up the subject of European philosophy of science to real thought and provide the structural basis for the interdisciplinary development of its specialist fields but also to provoke reflection on the idea of European philosophy of science This efforts should foster a contemporaneous reflection on what might be meant by philosophy of science in Europe and European philosophy of science

and how in fact awareness of it could assist philosophers interpret and motivate their research through a stronger collective identity The overarching aim is to set the background for a collaborative project organising systematising and ultimately forging an identity for European philosophy of science by creating research structures and developing research networks across Europe to promote its development

[Back to the Rough Grounds of Praxis](#) Daniel Franklin Pilario, 2005 What is praxis How do we do theology from its perspective These are the main questions which this book seeks to answer As propaedeutic to theological reflection it surveys the notion of praxis in the philosophical sociological and anthropological traditions from Aristotle and Marx to contemporary theories It argues that Pierre Bourdieu's theory of practice achieves a critical synthesis of these different traditions making it a viable theological dialogue partner Bourdieu provides us with a praxeological theory to scrutinize the complexity of the social realm and an epistemological theory to understand the mystery of God's presence in these socio historical conjunctures which serve as the privileged and only locus of His/Her revelation The author thus engages two theologians who take praxis practice as central to their theological methods Clodovis Boff liberation theology and John Milbank radical orthodoxy From the perspective of its appropriated framework this work attempts to avoid the limitations as well as preserves the gains achieved by these two approaches as it also explores the rudiments of a theological method relevant to our post Marxist and postmodern global contexts

The Oxford Handbook of Law and Humanities Simon Stern, Maksymilian Del Mar, Bernadette Meyler, 2020 How might law matter to the humanities How might the humanities matter to law In its approach to both of these questions The Oxford Handbook of Law and Humanities shows how rich a resource the law is for humanistic study as well as how and why the humanities are vital for understanding law Tackling questions of method key themes and concepts and a variety of genres and areas of the law this collection of essays by leading scholars from a variety of disciplines illuminates new questions and articulates an exciting new agenda for scholarship in law and humanities

New Challenges to Philosophy of Science Hanne Andersen, Dennis Dieks, Wenceslao J. Gonzalez, Thomas Uebel, Gregory Wheeler, 2013-05-28 This volume is a serious attempt to open up the subject of European philosophy of science to real thought and provide the structural basis for the interdisciplinary development of its specialist fields but also to provoke reflection on the idea of European philosophy of science This efforts should foster a contemporaneous reflection on what might be meant by philosophy of science in Europe and European philosophy of science and how in fact awareness of it could assist philosophers interpret and motivate their research through a stronger collective identity The overarching aim is to set the background for a collaborative project organising systematising and ultimately forging an identity for European philosophy of science by creating research structures and developing research networks across Europe to promote its development

[History of Rationalities](#) Luca Sciortino, 2023-03-11 Over time philosophers and historians of science have introduced different notions of ways of thinking This book presents compares and contrasts these

different notions It focuses primarily on Ian Hacking's idea of style of reasoning in order to assess and develop it into a more systematic theory of scientific thought arguing that Hacking's theory implies epistemic relativism Luca Sciortino also discusses the implications of Hacking's ideas for the study of the problem of contingency and inevitability in the development of scientific knowledge Handbook for the Historiography of Science Mauro L. Condé, Marlon Salomon, 2023-09-30 This book aims to perform a critical and broad assessment of the historiography of science produced from the late nineteenth century to the early twenty first century It presents its main authors concepts ideas conceptions and schools It also analyzes the historical circumstances of the rise of the discipline history of science and the relations of the historiography of science with related areas These chapters do not understand the historiography of science as a mere description or record of the history of science Instead they understand the historiography of science from the epistemological criteria and choices that guided the writing of the history of science in its different contexts In other words more than describing the record of the various possibilities of historiographical approaches to science the chapters carry out an epistemological reflection to assess the bases possibilities scope and limits of different historiographical conceptions authors and traditions that have established the writing of the history of science This book can be conceived as a reference work not only for professional historians and philosophers but also for academics from different backgrounds who are initiating themselves in the universe of history and philosophy of science be they scientists from different fields or young researchers from different backgrounds who want to start studying the history and philosophy of science **Bio-Art and the Environment** Amine Elgheryeni, 2021-07-05

Thanks to the ICT economy today's world is witnessing a gradual process of transfer and displacement from a society based on the production of man made material goods to a new society driven by science and knowledge This new society uses human intelligence to try to solve cultural problems to sustain activities to rationalize performances and to plan program and develop strategies and projects for the future This book therefore proposes a multi faceted framework through which contemporary art biology digital science geology technology physiology chemistry and philosophy enter into debate and complement each other It is structured around a number of logically interconnected questions such as What is bio art Can a laboratory artist manipulate living beings perform complex hybridizations and give birth to chimeras that would coexist with human beings Do we have the right to use them Should we authorize research that will allow the development of these techniques prohibit such research or fund it and Do we have the right to create embryos for transplantation or injection

IMAGINARIES ON MATTER: TOOLS, MATERIALS, ORIGINS Thomas Bo Jensen, Carolina Dayer, Jonathan Foote, 2023-11-21 Imaginaries on Matter Tools Materials Origins promotes an innovative architectural research agenda that connects historical cultural written research with digitally led material explorations The common thread is the notion of the material imagination disclosed in the reverie or material daydream which challenges overly pragmatic or unreflective material choices within current architectural practice In bonding our imagination directly with matter while also confronting
