*The Background of Ecology* Robert Patrick Macintosh, 1985 *The Truth of Ecology* Dana Phillips, 2003-03-27 *The Truth of Ecology* is a wide ranging polemical appraisal of contemporary environmental thought Focusing on the new field of ecocriticism from a thoroughly interdisciplinary perspective this book explores topics as diverse as the history of ecology in the United States the distortions of popular environmental thought the influence of Critical Theory on radical science studies and radical ecology the need for greater theoretical sophistication in ecocriticism the contradictions of contemporary American nature writing and the possibilities for a less devotional wilder approach to ecocritical and environmental thinking Taking his cues from Thoreau Stevens and Ammons from Wittgenstein Barthes and Eco from Bruno Latour and Michel Serres from the philosophers Rorty Hacking and Dennett and from the biologists Ernst Mayr and Stephen Jay Gould author Dana Phillips emphasizes an eclectic but pragmatic approach to a variety of topics His subject matter includes the doctrine of social construction the question of what it means to be interdisciplinary the disparity between scientific and literary versions of realism the difficulty of resolving the tension between facts and values or more broadly between nature and culture the American obsession with personal experience and the intellectual challenges posed by natural history Those challenges range from the near impossibility of defining ecological concepts with precision to the complications that arise when a birder tries to identify chickadees in poor light on a winter s afternoon in the Poconos

**Nature's Economy** Donald Worster, 1994-06-24 *Nature s Economy* is a wide ranging investigation of ecology s past first published in 1994 It traces the origins of the concept discusses the thinkers who have shaped it and shows how it in turn has shaped the modern perception of our place in nature

Our view of the living world is a product of culture and the development of ecology since the eighteenth century has closely reflected society's changing concerns. Donald Worster focuses on these dramatic shifts in outlook and on the individuals whose work has expressed and influenced society's point of view. The book includes portraits of Linnaeus, Gilbert White, Darwin, Thoreau, and such key twentieth-century ecologists as Rachel Carson, Frederic Clements, Aldo Leopold, James Lovelock, and Eugene Odum.

**Hawaiian Natural History, Ecology, and Evolution** Alan C. Ziegler, 2002-09-30. Not since William A. Bryan's 1915 landmark compendium *Hawaiian Natural History* has there been a single volume work that offers such extensive coverage of this complex but fascinating subject. Illustrated with more than two dozen color plates and a hundred photographs and line drawings, *Hawaiian Natural History: Ecology and Evolution* updates both the earlier publication and subsequent works by compiling and synthesizing in a uniform and accessible fashion the widely scattered information now available. Readers can trace the natural history of the Hawaiian Archipelago through the book's twenty-eight chapters or focus on specific topics such as island formation by plate tectonics, plant and animal evolution, flightless birds and their fossil sites, Polynesian migrational history and ecology, the effects of humans and exotic animals on the environment, current conservation efforts, and the contributions of the many naturalists who visited the islands over the centuries and the stories behind their discoveries. An extensive annotated bibliography and a list of audio-visual materials will help readers locate additional sources of information.

**Population Ecology in Practice** Dennis L. Murray, Brett K. Sandercock, 2020-02-10. A synthesis of contemporary analytical and modeling approaches in population ecology. The book provides an overview of the key analytical approaches that are currently used in demographic, genetic, and spatial analyses in population ecology. The chapters present current problems, introduce advances in analytical methods and models, and demonstrate the applications of quantitative methods to ecological data. The book covers new tools for designing robust field studies, estimation of abundance and demographic rates, matrix population models, and analyses of population dynamics and current approaches for genetic and spatial analysis. Each chapter is illustrated by empirical examples based on real datasets with a companion website that offers online exercises and examples of computer code in the R statistical software platform. Fills a niche for a book that emphasizes applied aspects of population analysis. Covers many of the current methods being used to analyse population dynamics and structure. Illustrates the application of specific analytical methods through worked examples based on real datasets. Offers readers the opportunity to work through examples or adapt the routines to their own datasets using computer code in the R statistical platform. *Population Ecology in Practice* is an excellent book for upper-level undergraduate and graduate students taking courses in population ecology or ecological statistics, as well as established researchers needing a desktop reference for contemporary methods used to develop robust population assessments.

***Insect Ecology: Concepts to Management*** K. V. Hari Prasad, 2022-05-20. This book presents comprehensive information on various aspects of ecology with special reference to insects to form a platform to design an ecologically sound insect pest management. Insects are the most

dominant and diverse group of living organism on earth Owing to their smaller size smaller space and food requirements more number of generation per unit time insects serves as one of the best subject matter for studies on various ecological aspects such as chemical ecology population dynamics predator parasitoid prey interactions etc The knowledge on various aspects of insect ecology helps in formulating an effective environmentally benign insect pest management This book is of interest and use to the post graduate students and researchers working on various aspects of insect ecology with special emphasis on population dynamics chemical ecology tri tropic interactions ecological engineering and Ecological Insect pest management

**Ecology** Sol 90,2012-12-01 Updated for 2013 Ecology is one title in the Britannica Illustrated Science Library Series Long ago when people still lived in caves perhaps at the same time when they developed habits that were different from those of other animals humans began to practice ecology They became keen observers of nature through such basic and instinctive actions as tracking both large wild animals and small prey discerning edible plants from poisonous ones and noting the time of year when different plants could be gathered From necessity and inherent curiosity humans began to learn about the relationships between living things and the environment As the field of ecology grew its focus went beyond the simple cataloging of living things in the world Ecologists also became interested in understanding how living things function and how they interrelate with one another and with the environment to explain that peculiar element that makes the Earth unique life We will begin by learning what ecology is and what it is not At times the word has been used incorrectly as a synonym for environmental protection Later we will look at how living things are classified before moving into the study of the environments in which they live the land water and air

*Conservation and Ecology* John P. Rafferty Associate Editor, Earth Sciences,2011-01-15 Discusses the history of ecology and biodiversity conservation stressing the importance of maintaining biologically diverse ecosystems and helping prevent unnatural extinctions of plant and animal species

**A History of the Ecosystem Concept in Ecology** Frank B. Golley,1993-01-01 The ecosystem concept the idea that flora and fauna interact with the environment to form an ecological complex has long been central to the public perception of ecology and to increasing awareness of environmental degradation In this book an eminent ecologist explains the ecosystem concept tracing its evolution describing how numerous American and European researchers contributed to its evolution and discussing the explosive growth of ecosystem studies Golley surveys the development of the ecosystem concept in the late nineteenth and early twentieth centuries and discusses the coining of the term ecosystem by the English ecologist Sir Arthur George Tansley in 1935 He then reviews how the American ecologist Raymond Lindeman applied the concept to a small lake in Minnesota and showed how the biota and the environment of the lake interacted through the exchange of energy Golley describes how a seminal textbook on ecology written by Eugene P Odum helped to popularize the ecosystem concept and how numerous other scientists investigated its principles and published their results He relates how ecosystem studies dominated ecology in the 1960s and became a key element of the International Biological Program biome studies in the

United States a program aimed at the betterment of mankind specifically through conservation human genetics and improvements in the use of natural resources how a study of watershed ecosystems in Hubbard Brook New Hampshire blazed new paths in ecosystem research by defining the limits of the system in a natural way and how current research uses the ecosystem concept Throughout Golley shows how the ecosystem concept has been shaped internationally by both developments in other disciplines and by personalities and politics      *Unlikely Environmentalists* Paul Charles Milazzo,2006 Reveals how boosters bureaucrats and engineers not grassroots protesters were truly the ones responsible for spearheading the passage of the Clean Water Act of 1972 How these unlikely protagonists helped to pass the era s most far reaching regulatory law gives us rare insight into how Congress was able to take the lead in addressing those concerns namely in the form of water quality issues      *The Ecology of Agroecosystems* John Vandermeer,2011 Agroecology is the science of applying ecological concepts and principles to the design development and management of sustainable agricultural systems The Ecology of Agroecosystems highlights a collection of alternative agricultural methodologies and philosophies and provides an interdisciplinary approach that bridges the sociopolitical and historical context of agriculture It includes the technical issues in a serious and ecological fashion and captures the complex merging of ecology agriculture politics and economics in both a historical and contemporary context Readers will learn not only about the ethical and moral elements related to producing food of questionable quality while possibly impairing the environment but also about the soil chemistry involved      *Property Rights in a Social and Ecological Context* Susan Hanna,Mohan Munasinghe,1995-01-01 The collection of papers in the book Property Rights and the Environment Social and Ecological Issues 6 and this companion volume examine the relationships between people the environment and property rights and the ways in which a given social and ecological context affects those relationships The papers are products of a research program at the Royal Swedish Academy of Sciences Stockholm The main objective of the program was to convene social scientists and natural scientists to address research questions in their full social and ecological dimensions The program s participants addressed five general issues related to property rights and the environment 1 the design of governance systems for sustainability 2 the relationship between equity stewardship and environmental resilience 3 the use of traditional knowledge in resource management 4 the mechanisms that link people to their environments and 5 the role played by population and poverty This volume presents case studies that address questions of design application in those five areas 6 Also available Property Rights and the Environment Social and Ecological Issues ISBN 0 8213 3415 8 Stock No 13415      *Populations, Biocommunities, Ecosystems* George P. Stamou,2012 Discussions on historical and philosophical issues in ecology have been rather limited This volume presents an enriched and comprehensive review on ecological issues The topics covered in this e book include the emergence of the field of life history st      *The Promise of Green Politics* Douglas Torgerson,1999 An exploration of the relationship between the means and the ends in green politics      **Nature's Ghosts** Mark V. Barrow,2009-10-15 As Mark V Barrow Jr

reveals in *Nature's Ghosts* the threat of species loss has haunted Americans since the early days of the republic Barrow shows how Americans came to understand that it was not only possible for entire species to die out but that humans themselves could be responsible for their extinction These fascinating stories of endangered animals and the dedicated individuals who have studied and struggled to protect them offer an unprecedented view of what we've lost and a stark reminder of the hard work of preservation still ahead Thrive in Ecology and Evolution Alan Beeby, Ralph

Beeby, 2013-02-14 The *Thrive in Bioscience* revision guides are written to help undergraduate students achieve exam success in all core areas of bioscience They communicate all the key concepts in a succinct easy to digest way using features and tools both in the book and in digital form to make learning even more effective **Sensory Ecology, Behaviour, and Evolution** Martin Stevens, 2013-02-07 It deals with both mechanistic questions e.g
