**Airline Deregulation and Laissez-Faire Mythology** Paul S. Dempsey, Andrew R. Goetz, 1992-09-08 Airline deregulation is a failure conclude Professors Dempsey and Goetz They assault the conventional wisdom in this provocative book finding that the Airline Deregulation Act of 1978 championed by a profound political movement which also advocated the deregulation of the bus trucking rail and pipeline industries failed to achieve the promises of its proponents Only now is the full impact of deregulation being felt Airline deregulation has resulted in unprecedented industry concentration miserable service a deterioration in labor management relations a narrower margin of safety and higher prices for the consumer This comprehensive book begins by exploring the strategy tactics and egos of the major airline robber barons including Frank Lorenzo and Carl Icahn In separate chapters the strengths weaknesses and corporate cultures of each of the major airlines are evaluated Part Two assesses the political economic and social justifications for New Deal regulation of aviation and its deregulation in the late 1970s Part Three then addresses the major consequences of deregulation in chapters on concentration pricing service and safety and Part Four advances a legislative agenda for solving the problems that have emerged Professors Dempsey and Goetz advocate a middle course of responsible government supervision between the dead hand of regulation of the 1930s and the contemporary evil of market Darwinism The book will be of particular interest to airline and airport industry executives government officials and students and scholars in public policy economics business political science and transportation *Airline Deregulation and Laissez-Faire Mythology* Paul Stephen Dempsey, 2013 This article examines the *Airline Deregulation and Laissez-Faire Mythology* Paul Stephen Dempsey, 1992 **Competition and Regulation in the Airline Industry** Steven Truxal, 2013-01-04 An examination of the relationship between competition and the deregulation and liberalisation of the US and European air transport sectors reveals that the structure of the air transport sector has undergone a number of significant changes A growing number of airlines are entering into horizontal and vertical cooperative arrangements and integration including franchising codeshare agreements alliances virtual mergers and in some cases mergers with other airlines groups of airlines or other complementary lines of business such as airports This book considers the current legal issues affecting the air transport sector incorporating recent developments in the industry including the end of certain exemptions from EU competition rules the effect of the EU US Open Skies Agreement the accession of new EU Member States and the Lisbon Treaty The book explores the differing European and US regulatory approaches to the changes in the industry and examines how airlines have remained economically efficient in what is perceived as a complex and confused regulatory environment Competition and Regulation in the Airline Industry will be of particular interest to academics and students of competition law as well as EU law **The Geographies of Air Transport** Andrew R. Goetz, Lucy Budd, 2016-03-09 Making a detailed contribution to geographies of air transport and aeromobility this book examines the practices and processes that produce particular patterns of air transport provision both regionally and

globally In so doing it updates the seminal contributions of Eva Taylor 1945 Kenneth Sealy 1957 Brian Graham 1995 and others to the study of air transport geography Leading scholars in the field offer a unique insight into the key developments that have occurred in the field and the implications that these developments have had for geography geographers and global patterns of past present and future air transport Although globalization and liberalization processes have greatly expanded the demand for air transport over the last two decades the industry has experienced several major setbacks due to economic security and environmental concerns Many of these impacts have been much more pronounced in some regions such as North America and Europe while others such as Asia Pacific have not been as adversely affected Accordingly there is a clear need to examine these recent economic and geopolitical changes from a geographical perspective given the differentiated pattern of effects from global processes Addressing this need this volume opens with thematic chapters covering key topics such as the historical geographies socio cultural mobilities environmental externalities urban geographies and sustainability of the global air transport industry followed by regional analysis of the industry in Asia Pacific Latin America Greater Middle East and Africa as well as North America and Europe

**The Best Transportation System in the World** Mark H. Rose,Bruce Edsall Seely,Paul F. Barrett,2006 From 1920 to the mid 1990s American transportation in the form of railroads trucks and airlines was simply a creature of politics and public policy In brief the markets for rail truck and airlines were not natural entities but had been created through hard fought political contests full time lobbying and unceasing litigation Between 1940 and the late 1970s moreover leaders of rail truck and airline firms lobbied and litigated to protect the workings of this regulatory regime In the mid 1950s President Eisenhower asked Congress to award railroad executives authority to modify prices and service Eisenhower was concerned about a railroad industry in decline During the 1960s President Johnson sought broad deregulation of rail trucks and airline firms Johnson wanted another device to fine tune the economy In the 1970s Presidents Nixon Ford and Carter sought to deregulate transportation with a view toward reversing stagflation Between 1978 and 1980 Congress and President Carter approved deregulation of airlines trucking and railroads Carter aide Mary Schuman played a crucial role in bringing about airline deregulation For all the market talk that surrounded transportation politics before and after 1980 however officials of the American state had been and remained the principal agents creating those markets

Bednarek, 2016-08-31 This book explores the relationship between cities and their commercial airports These vital transportation facilities are locally owned and managed and civic leaders and boosters have made them central to often expansive economic development dreams including the construction of architecturally significant buildings However other metropolitan residents have paid a high price for the expansion of air transportation as battles over jet aircraft noise resulted not only in quieter jet engine technologies but profound changes in the metropolitan landscape with the clearance of both urban and suburban neighborhoods And in the wake of 9 11 the US commercial airport has emerged as the place where Americans most fully experience the security regime introduced after those terrorist attacks
