Fil Hearn, 2003-10-10 Identifying the operative ideas in architectural theory from ancient Rome to the present and codifying them into coherent theoretical systems for students practitioners and the general reader In *Ideas That Shaped Buildings* Fil Hearn identifies and codifies into theoretical systems the operative tenets of architectural theory from ancient Rome to the present With this strikingly original synthesis of architectural history and theory he constructs an intellectual armature on which virtually any architectural concept past or present can be positioned Dealing mainly with the treatises that have been highly influential historically he organizes their concepts thematically and analyzes their development through time Straightforward and concise *Ideas That Shaped Buildings* is readily accessible to architecture students practicing architects and the general public indeed anyone interested in understanding the design rationale of buildings Its overarching message is that far from being constricting proper knowledge and application of architectural theory is enabling and inspiring and makes creative freedom possible by providing the conceptual awareness needed to devise a design After an introductory history of the development of architectural theory the text is divided into four parts The first deals with issues relevant to all theories of architecture The second treating theory from antiquity to 1800 focuses on the prescriptive conventions inherent in the classical tradition The third treating theory after 1800 focuses on the inspirational principles prompted by rationalist perceptions of the Gothic tradition The fourth treating theory since 1965 deals with rationales beyond rationalism and the influence of computers on design method and design formulation The concepts discussed are illustrated with theoretical drawings and images of actual buildings **American Bookseller**, 1993 **A Many-Colored Glass** Freeman J. Dyson, 2010-02-03 Freeman Dyson's latest book does not attempt to bring together all of the celebrated physicist's thoughts on science and technology into a unified theory The emphasis is instead on the myriad ways in which the universe presents itself to us and how as observers and participants in its processes we respond to it Life like a dome of many colored glass wrote Percy Bysshe Shelley stains the white radiance of eternity The author seeks here to explore the variety that gives life its beauty Taken from Dyson's recent public lectures delivered to audiences with no specialized knowledge in hard sciences the book begins with a consideration of the practical and political questions surrounding biotechnology As he seeks how best to explain the place of life in the universe Dyson then moves from the ethical to the purely scientific The book concludes with an attempt to understand the implications of biology for philosophy and religion The pieces in this collection

touch on numerous disciplines from astronomy and ecology to neurology and theology speaking to the lay reader as well as to the scientist As always Dyson s view of human nature and behavior is balanced and his predictions of a world to come serve primarily as a means for thinking about the world as it is today **Complete Catalog of Books in All Fields** Dover Publications, Inc,1997
