Airway Secretion:

Airway Mucus: Basic Mechanisms and Clinical Perspectives D.F. Rogers, Michael Lethem, 1997-09-23 Conceptually unsavoury airway mucus is vital to homeostasis in the respiratory tract In contrast when abnormal mucus contributes significantly to the pathophysiology of a number of severe bronchial diseases including asthma chronic bronchitis and cystic fibrosis This volume provides wide ranging and in depth coverage of the scientific and clinical aspects of airway mucus It commences with introductory chapters which address the biochemical and molecular biological basis of airway mucus and continues with comprehensive coverage of the various physiological and rheological aspects of respiratory secretions The clinical aspects of the topic are then considered with chapters discussing the involvement of mucus secretions in bacterial infection and in hypersecretory diseases of the airway The volume concludes with a discussion of the therapeutic aspects of the topic both in terms of the possible approaches to the treatment of mucus hypersecretion and the interaction of these drugs with airway mucus Written by leading experts in the field each contribution provides a comprehensive review of its particular subject Reflecting the latest advances in this important area of respiratory research this volume will be of great interest to scientists and clinicians working in the field of airway secretions and related areas

Respiratory Disease and its Management A. McLuckie, 2009-07-28 Medical training for Intensive Care Medicine ICM has made great developments over the years Recent advances have led to the introduction of competency based training with a strong focus on the development of specific competencies at basic intermediate and advanced stages of learning This ensures trainees hold the appropriate skills and knowledge to undertake safe clinical practice and thus provide good patient care One of the key topics covered in ICM training is respiratory disease and its management Based on this it would therefore seem appropriate to introduce a text that addresses each of the key areas

Respiratory Management of ALS: Amyotrophic Lateral Sclerosis Lee Guion, 2010-10-25 The Respiratory Management of Motor Neuron Disease brings together the latest research expert opinions and treatment options for respiratory symptom management It provides a detailed step by step approach to assessment of upper and lower airway structures and how motor neuron loss impairs function Treatment options emphasize symptom management and enhanced quality of life Palliative care end of life decision making and long term mechanical ventilation in patients with MND ALS are included This textbook encourages critical thinking through 1 inclusion of researchable questions at the end of chapters and 2 discussion of different approaches to patient assessment and symptom management when medical evidence is lacking Students will be encouraged to use their understanding of anatomy physiology pharmacology lung expansion and secretion mobilization techniques to review support or challenge current practices in MND ALS Respiratory therapy students respiratory care practitioners nurses in neurology clinics primary care physicians and pulmonologists whose practice includes patients with motor neuron disease will all benefit from the detailed review of bulbar and thoracic muscles loss of function and treatment recommendations

Mucus Hypersecretion in Respiratory Disease

Derek J. Chadwick, Jamie A. Goode, 2003-07-07 A number of chronic respiratory diseases including chronic bronchitis asthma cystic fibrosis and bronchiectasis are characterized by mucus hypersecretion Following damage to the airway epithelium a repair process of dedifferentiation regenerative proliferation and redifferentiation takes place that is invariably accompanied by mucus hypersecretion as a key element in the host defence mechanism In chronic respiratory diseases however excessive mucus production leads to a pathological state with increased risk of infection hospitalization and morbidity An understanding of the mechanisms that underlie and maintain this hypersecretory phenotype is therefore crucial for the development of rational approaches to therapy Despite a high and increasing prevalence and cost to healthcare services and society mucus hypersecretion in chronic respiratory disease has received little attention until recently probably because of the difficulties inherent in studying this pathology Only in the last few years have some of the genes involved in mucus secretion been characterized The recent availability of genomic sequence information and specific antibodies has led to an explosion of interest in this area making this publication particularly timely This book draws together contributions from an international and interdisciplinary group of experts whose work is focused on both basic and clinical aspects of the problem Coverage includes epidemiology airways infection and mucus hypersecretion the genetics and regulation of mucus production models of mucus hypersecretion and the implications of new knowledge for the development of novel therapies

Muscarinic Receptors in Airways Diseases Johan Zaagsma, Herman Meurs, Ad F. Roffel, 2013-03-08 What are the different muscarinic acetylcholine receptor subtypes and how are they distributed in the airways and molecular signalling mechanisms What is their function in neurogenic and non neurogenic control of the airways and in inflammatory mechanisms How is their gene expression regulated The great importance of muscarinic acetylcholine receptors for the pathophysiology and treatment of chronic inflammatory obstructive airways diseases calls for a comprehensive and integrated overview of the current knowledge to address such questions to discuss the role of these receptor subtypes in diseases such as asthma and COPD and to present novel perspectives on antimuscarinic drug development The present book is the worthy result of this need It points out innovative insights into the hitherto poorly understood role of postjunctional muscarinic M2 receptors in airway smooth muscle contraction and sheds some light on the novel concepts of antimuscarinic drug development with special reference to the l
