problem based on the adequate characterization of the materials will enable implementing environmentally friendly engineering principles when the efficient use of advanced materials guarantees the required structural safety Identifying fundamental relationships between the structure of advanced composites and their physical properties is the focus of this book The collected articles explore the development of sustainable composites with valorized manufacturability corresponding to Industrial Revolution 4.0 ideology The publications amongst others reveal that the application of nano particles improves the mechanical performance of composite materials heat resistant aluminium composites ensure the safety of overhead power transmission lines chemical additives can detect the impact of temperature on concrete structures This book demonstrates that construction materials choice has considerable room for improvement from a scientific viewpoint following heuristic approaches *The Alkali-Silica Reaction in Concrete* R N Swamy,1991-09-01 This book reviews the fundamental causes and spectrum effects of ASR It considers the advances that have been made in our understanding of this problem throughout the world *Design of the National Water-quality Assessment Program* Robert J.
