Newmeyer,2022 This volume is devoted to a major chapter in the history of linguistics in the United States the period from the 1930s to the 1980s It offers detailed discussions of the key issues and developments in the transition from post Bloomfieldian structural linguistics to early generative grammar      **The Formal Complexity of Natural Language** W.J. Savitch,E. Bach,W.E. Marsh,Gila Safran-Naveh,2012-12-06 Ever since Chomsky laid the framework for a mathematically formal theory of syntax two classes of formal models have held wide appeal The finite state model offered simplicity At the opposite extreme numerous very powerful models most notable transformational grammar offered generality As soon as this mathematical framework was laid devastating arguments were given by Chomsky and others indicating that the finite state model was woefully inadequate for the syntax of natural language In response the completely general transformational grammar model was advanced as a suitable vehicle for capturing the description of natural language syntax While transformational grammar seems likely to be adequate to the task many researchers have advanced the argument that it is too adequate A now classic result of Peters and Ritchie shows that the model of transformational grammar given in Chomsky s *Aspects IJ* is powerful indeed So powerful as to allow it to describe any recursively enumerable set In other words it can describe the syntax of any language that is describable by any algorithmic process whatsoever This situation led many researchers to reassess the claim that natural languages are included in the class of transformational grammar languages The conclusion that many reached is that the claim is void of content since in their view it says little more than that natural language syntax is doable algorithmically and in the framework of modern linguistics psychology or neuroscience that is axiomatic      *Language and Linguistics* John Lyons,1981-05-29 A 1981 introduction to linguistics and the study of language for beginning students and readers with no previous knowledge or training in the subject      *The Boundaries of Babel* Andrea Moro,2008 An exploration of what research at the intersection of contemporary theoretical

linguistics and the cognitive neurosciences can reveal about the constraints on the apparently chaotic variation in human languages In *The Boundaries of Babel* Andrea Moro tells the story of an encounter between two cultures contemporary theoretical linguistics and the cognitive neurosciences The study of language within a biological context has been ongoing for more than fifty years The development of neuroimaging technology offers new opportunities to enrich the biolinguistic perspective and extend it beyond an abstract framework for inquiry As a leading theoretical linguist in the generative tradition and also a cognitive scientist schooled in the new imaging technology Moro is uniquely equipped to explore this Moro examines what he calls the hidden revolution in contemporary science the discovery that the number of possible grammars is not infinite and that their number is biologically limited This radical but little discussed change in the way we look at language he claims will require us to rethink not just the fundamentals of linguistics and neurosciences but also our view of the human mind Moro searches for neurobiological correlates of the boundaries of Babel the constraints on the apparent chaotic variation in human languages by using an original experimental design based on artificial languages He offers a critical overview of some of the fundamental results from linguistics over the last fifty years in particular regarding syntax then uses these essential aspects of language to examine two neuroimaging experiments in which he took part He describes the two neuroimaging techniques used positron emission topography or PET and functional magnetic resonance imaging or fMRI but makes it clear that techniques and machines do not provide interesting data without a sound theoretical framework Finally he discusses some speculative aspects of modern research in biolinguistics regarding the impact of the linear structure of linguistics expression on grammar and more generally some core aspects of language acquisition genetics and evolution
