Holmyard, 2012-04-26 Alchemy is thought to have originated over 2000 years ago in Hellenic Egypt the result of three converging streams Greek philosophy Egyptian technology and the mysticism of Middle Eastern religions Its heyday was from about 800 A D to the middle of the seventeenth century and its practitioners ranged from kings popes and emperors to minor clergy parish clerks smiths dyers and tinkers Even such accomplished men as Roger Bacon Thomas Aquinas Sir Thomas Browne and Isaac Newton took an interest in alchemical matters In its search for the Philosopher's Stone that would transmute base metals into silver and gold alchemy took on many philosophical religious and mystical overtones These and many other facets of alchemy are explored with enormous insight and erudition in this classic work E J Holmyard a noted scholar in the field begins with the alchemists of ancient Greece and China and goes on to discuss alchemical apparatus Islamic and early Western alchemy signs symbols and secret terms Paracelsus English Scottish and French alchemists Helvetius Price and Semler and much more Ranging over two millennia of alchemical history Mr Holmyard shows how like astrology and witchcraft alchemy was an integral part of the pre scientific moral order arousing the cupidity of princes the blind fear of mobs and the intellectual curiosity of learned men Eventually however with the advent and ascension of the scientific method the hopes and ideas of the alchemists faded to the status of pseudo science That transformation as well as alchemy's undeniable role as a precursor of modern chemistry are brilliantly illuminated in this book Students of alchemy chemistry the history of science and the occult plus anyone interested in the origin and evolution of one of mankind's most enduring and influential myths will want to have a copy of this masterly study **Names, Natures and Things** Syed

Nomanul Haq, 2012-12-06 Jabir ibn Hayyan for a long time the reigning alchemical authority both in Islam and the Latin West has exercised numerous generations of scholars To be sure it is not only the vexed question of the historical authorship and dating of the grand corpus Jabirianum which poses a serious scholarly challenge equally challenging is the task of unraveling all those obscure and tantalizing discourses which it contains This book which marks the first full scale study of Jabir ever to be published in the English language takes up both challenges The author begins by critically reexamining the historical foundations of the prevalent view that the Jabirian corpus is the work not of an 8th century individual but that of several generations of Shi'i authors belonging to the following century and later Tentatively concluding that this view is problematic the author therefore infers that its methodological implications are also problematic Thus developing its own methodological matrix the book takes up the second challenge namely that of a substantive analysis and explication of a Jabirian discourse

the Book of Stones Here explicating Jabir's notions of substance and qualities analyzing his ontological theory of language and unraveling the metaphysics of his Science of Balance the author reconstructs the doctrinal context of the Stones and expounds its central theme He then presents an authoritative critical edition of a substantial selection of the text of the Stones based on all available manuscripts This critical edition has been translated in its entirety and is provided with exhaustive commentaries and textual notes another pioneering feature of this book for this is the first English translation of a Jabirian text to emerge in print after a whole century An outstanding contribution is that it announces and presents an exciting textual discovery the author has found in the Stones a hitherto unknown Arabic translation of part of Aristotle's Categories Given that we have so far known of only one other and possibly later classical Arabic translation of the Greek text Haq's discovery gives this book an historical importance

The Alchemical Body David Gordon White, 2012-07-10 A brilliant disquisition on mostly unpublished texts for three allied systems of tantric thought and praxis sexual alchemical and hatha yogic The Journal of Asian Studies The Alchemical Body excavates and centers within its Indian context the lost tradition of the medieval Siddhas Working from previously unexplored alchemical sources David Gordon White demonstrates for the first time that the medieval disciplines of Hindu alchemy and hatha yoga were practiced by one and the same people and that they can be understood only when viewed together White opens the way to a new and more comprehensive understanding of medieval Indian mysticism within the broader context of south Asian Hinduism Buddhism Jainism and Islam White proves a skillful guide in disentangling historical and theoretical complexities that have thus far bedeviled the study of these influential aspects of medieval Indian culture Yoga World Anyone seriously interested in finding out more about authentic tantra original hatha yoga embodied liberation sacred sexuality paranormal abilities healing and of course alchemy will find White's extraordinary book as fascinating as any Tom Clancy thriller Georg Feuerstein Yoga Journal Remarkable a study of the language of mystic experience and expression the multitudinous symbols rituals and doctrines of the medieval siddhis yogis and alchemists Skeptic Meditations

SHEDI NGER Professor of Religion Luther College Dr Zulfiqar Ali Shah's *Islam and the English Enlightenment* is one of the most profoundly enlightening books I have read in years Dr Shah compellingly demonstrates that the thinkers of English Enlightenment were undeniably indebted to Islamic sciences and thought and that the foundational principles of rationalist thought scientific inquiry and religious toleration were deeply anchored in the Islamic tradition KHALED ABOU EL FADL Omar Azmeralda Alfi Distinguished Professor of Law UCLA School of Law This is a book that anyone interested in stepping outside a Eurocentric view of the rise of the West and of the modern age must read MICHAEL A GILLESPIE Professor of Political Science Philosophy Duke University Dr Shah convincingly demonstrates the central role that Islam played in shaping the values and ideas of the Enlightenment reformers such as John Locke and Isaac Newton who had helped to produce the modern world GERALD MACLEAN Emeritus Professor University of Exeter
