**Geography and Drug Addiction** Yonette F. Thomas, Douglas Richardson, Ivan Cheung, 2008-09-24 Making Connections Geography and Drug Addiction Geography involves making connections connections in our world among people and places cultures human activities and natural processes It involves understanding the relationships and connections between seemingly disparate or unrelated ideas and between what is and what might be Geography also involves connecting with people When I first encountered an extraordinarily vibrant intelligent and socially engaged scientist at a private dinner several years ago I was immediately captivated by the intensity of her passion to understand how and why people become addicted to drugs and what could be done to treat or prevent drug addiction Fortunately she was willing to think beyond the bounds of her own discipline in her search for answers Our conversation that evening which began with her research on fundamental biochemical processes of drug addiction in the human body evolved inevitably to an exploration of the ways in which research on the geographical context of drug addiction might contribute to the better understanding of etiology of addiction its diffusion its interaction with geographically variable environmental social and economic factors and the strategies for its treatment and prevention This fascinating woman I soon learned was Nora Volkow the Director of the National Institute on Drug Abuse as well as the granddaughter of Leon Trotsky

**National Commission to Study the Cause of the Demand for Drugs in the United States** United States. Congress. House. Committee on Government Operations. Legislation and National Security Subcommittee, 1993. *Considers 102 H.R. 464 Substance Use in a Comparative Perspective* Arnošt Veselý, Dagmar Džúrová, 2013-10-01. The book follows two main objectives. First, it aims at putting together different pieces of evidence on developments of substance use and risk behavior in five post communist countries over time. Thus, first objective is to build a complex and reliable empirical evidence base for empirical comparison and identify evidence gaps. Second, we try to analyze and interpret such developments using both quantitative and qualitative analysis and to relate them to the formulated theoretical framework. Since available empirical evidence is often far from conclusive, the findings presented are sometimes rather exploratory and should be tested by further and more detailed research. The book is structured as follows. At the beginning, we review various factors that have been found to be associated with substance use. We try to present them in a complex and systematic way and create a conceptual framework for understanding and explaining substance use in a comparative way. Next chapter describes the developments of substance use over time in five countries analyzed. This description is based upon publicly available WHO data along with supplementary comments and interpretations by national experts. Next chapter is devoted to country profiles of all five countries involved in the project and in depth overviews of developments in their respective substance use situations. All reviews are written according to the same structure, thus facilitating comparison. The last chapter presents a multilevel analysis of substance use in the Czech Republic combining data for individuals and regions.
