Almost Periodic Functions And Functional Equations:

Almost-Periodic Functions and Functional Equations L. Amerio, G. Prouse, 2013-11-11 The theory of almost periodic functions with complex values created by H Bohr 1 in his two classical papers published in Acta Mathematica in 1925 and 1926 has been developed by many authors and has had note worthy applications we recall the works of Weyl De la Vallee Poussin Bochner Stepanov Wiener Besicovic Favard Delsarte Maak Bogoliubov Levitan This subject has been widely treated in the monographs by Bohr 2 Favard 1 Besicovic 1 Maak 1 Levitan 1 Cinquini 1 Corduneanu 1 2 An important class of almost periodic functions was studied at the beginning of the century by Bohl and Esclangon Bohr's theory has been extended by Muckenhoupt 1 in a particular case and subsequently by Bochner 1 and by Bochner and Von Neumann 1 to very general abstract spaces The extension to Banach spaces is in particular of great interest in view of the fundamental importance of these spaces in theory and application Almost-Periodic Functions and Functional Equations L. Amerio, G.

Prouse, 1971-01-01 **Abstract Almost-periodic Functions and Functional Equations** Luigi Amerio, 1965 Almost Periodic Oscillations and Waves Constantin Corduneanu, 2009-04-29 This text is well designed with respect to the exposition from the preliminary to the more advanced and the applications interwoven throughout It provides the essential foundations for the theory as well as the basic facts relating to almost periodicity In six structured and self contained chapters the author unifies the treatment of various classes of almost periodic functions while uniquely addressing oscillations and waves in the almost periodic case This is the first text to present the latest results in almost periodic oscillations and waves The presentation level and inclusion of several clearly presented proofs make this work ideal for graduate students in engineering and science The concept of almost periodicity is widely applicable to continuum mechanics electromagnetic theory plasma physics dynamical systems and astronomy which makes the book a useful tool for mathematicians and physicists

Volterra Integral and Functional Equations G. Gripenberg, S. O. Londen, O. Staffans, 1990 This book looks at the theories of Volterra integral and functional equations Handbook of Functional Equations Themistocles M. Rassias, 2014-11-18 As Richard Bellman has so elegantly stated at the Second International Conference on General Inequalities Oberwolfach 1978 There are three reasons for the study of inequalities practical theoretical and aesthetic On the aesthetic aspects he said As has been pointed out beauty is in the eye of the beholder However it is generally agreed that certain pieces of music art or mathematics are beautiful There is an elegance to inequalities that makes them very attractive The content of the Handbook focuses mainly on both old and recent developments on approximate homomorphisms on a relation between the Hardy Hilbert and the Gabriel inequality generalized Hardy Hilbert type inequalities on multiple weighted Orlicz spaces half discrete Hilbert type inequalities on affine mappings on contractive operators on multiplicative Ostrowski and trapezoid inequalities Ostrowski type inequalities for the Riemann Stieltjes integral means and related functional inequalities Weighted Gini means controlled additive relations Szasz Mirakyan operators extremal problems in

polynomials and entire functions applications of functional equations to Dirichlet problem for doubly connected domains nonlinear elliptic problems depending on parameters on strongly convex functions as well as applications to some new algorithms for solving general equilibrium problems inequalities for the Fisher's information measures financial networks mathematical models of mechanical fields in media with inclusions and holes

Functional Equations in Several Variables J. Aczél, J. Dhombres, 1989 This treatise deals with modern theory of functional equations in several variables and their applications to mathematics information theory and the natural behavioural and social sciences The authors have chosen to emphasize applications though not at the expense of theory so they have kept the prerequisites to a minimum

Linear Functional Equations. Operator Approach Anatolij Antonevich, 2012-12-06 In this book we shall study linear functional equations of the form $m \sum_{k=1}^n U_k(x) f_k(x) = 1$ where U is an unknown function from a given space $F(X)$ of functions on a set X $U_k: X \rightarrow X$ are given mappings a_k and f are given functions Our approach is based on the investigation of the operators given by the left hand side of equation 1 In what follows such operators will be called functional operators We will pay special attention to the spectral properties of functional operators first of all to invertibility and the Noether property Since the set X the space $F(X)$ the mappings U_k and the coefficients a_k are arbitrary the class of operators of the form 1 is very rich and some of its individual representatives are related with problems arising in various areas of mathematics and its applications In addition to the classical theory of functional equations among such areas one can indicate the theory of functional differential equations with deviating argument the theory of nonlocal problems for partial differential equations the theory of boundary value problems for the equation of a vibrating string and equations of mixed type a number of problems of the general theory of operator algebras and the theory of dynamical systems the spectral theory of automorphisms of Banach algebras and other problems

Almost Periodic Differential Equations A.M. Fink, 2006-11-15

Convolution Type Functional Equations on Topological Abelian Groups László Székelyhidi, 1991 This book is devoted to the possible applications of spectral analysis and spectral synthesis for convolution type functional equations on topological abelian groups The solution space of convolution type equations has been synthesized in the sense that the general solutions are built up from exponential monomial solutions In particular equivalence of systems of functional equations can be tested This leads to a unified treatment of classical equations and to interesting new results
