Dayal, 2024-01-24 A timely volume for understanding our future energy landscape and for creating a bridge towards a decarbonized energy system *Alternative and Unconventional Energy Sources* discusses various alternative energy sources and their present usage including wind solar ocean and geothermal energy along with unconventional fossil energy sources such as shale gas The text covers the development and global adoption of each energy source along with their environmental and economic impacts resulting in a comprehensive and in depth treatment of the subject This approach provides the reader with a one stop reference for each particular energy source making the information accessible to all regardless of discipline or current level of experience with each energy source Specific topics covered in *Alternative and Unconventional Energy Sources* include The controversial perception of shale gas and its future potential as an energy source Technologies to reduce harmful emissions of CO₂ and other waste gases and their potential to cause less global warming Downsides of commonly accepted alternative energy sources such as the disposal of nuclear waste and land requirements for solar panels How undeveloped countries can make use of local energy sources to become more efficient and competitive *Alternative and Unconventional Energy Sources* is a highly accessible and useful resource for geographers geologists petroleum engineers renewable energy specialists and policy makers who wish to understand the current state of global energy production and where the industry may turn in the coming years

Integration of Alternative Sources of Energy Felix A. Farret, M. Godoy Simoes, 2006-04-20 A unique electrical engineering approach to alternative sources of energy Unlike other books that deal with alternative sources of energy from a mechanical point of view *Integration of Alternative Sources of Energy* takes an electrical engineering perspective Moreover the authors examine the full spectrum of alternative and renewable energy with the goal of developing viable methods of integrating energy sources and storage efficiently Readers become thoroughly conversant with the principles possibilities and limits of alternative and renewable energy The book begins with a general introduction and then reviews principles of thermodynamics Next the authors explore both common and up and coming alternative energy sources including hydro wind solar photovoltaic thermosolar fuel cells and biomass Following that are discussions of microturbines and induction generators as well as a special chapter dedicated to energy storage systems After setting forth the fundamentals the authors focus on how to integrate the various energy sources for electrical power production Discussions related to system operation maintenance and management as well as standards for interconnection are also set forth Throughout the book diagrams are provided to demonstrate the electrical operation of all the systems that are presented In addition extensive use of examples helps readers better grasp how integration of alternative energy sources can be accomplished The final chapter gives readers the opportunity to learn about the HOMER Micropower Optimization Model This computer model developed by

the National Renewable Energy Laboratory NREL assists in the design of micropower systems and facilitates comparisons of power generation techniques Readers can download the software from the NREL Web site This book is a must read for engineers consultants regulators and environmentalists involved in energy production and delivery helping them evaluate alternative energy sources and integrate them into an efficient energy delivery system It is also a superior textbook for upper level undergraduates and graduate students

Alternative Energy Sources Andrzej L. Wasiak, 2021-05-20 The search for alternative sources of energy is an attempt to solve two of the main problems facing the modern world Today's resources are mainly based on fossil flammable substances such as coal oil and natural gas The first problem is related to the expected and observed depletion of deposits not only those available but also less accessible Another is related to global warming from emissions of greenhouse gases mainly carbon dioxide as well as emissions of other pollutants in the atmosphere Mitigating the harmful effects of fossil fuel use is an obvious challenge for mankind This Special Issue includes articles on the search for new raw materials and new technologies for obtaining energy such as those existing in nature methane hydrates biomass etc new more efficient technologies for generating electricity as well as analyses of the possibilities and conditions of use of these resources for practical applications

Alternative Energy Sources and Technologies Mariano Martín, 2016-03-22 Presenting a comprehensive analysis of the use of alternative sources of energy and technologies to produce fuels and power this book describes the energy value chain from harvesting the raw material i.e. solar wind biomass or shale gas followed by analysis of the processing steps into power fuels and or chemicals and finally the distribution of the products Featuring an examination of the techno economic processes and integration opportunities which can add value to by products or promote the use of different sources of energy within the same facility this book looks at the tools that can make this integration possible as well as utilising a real world case study The case study of the operation of El Hierro island is used as an example of the current effort towards more efficient use of the resources available Tackling head on the open challenges of the supply the variability of the source and its prediction the description of novel processes that are being developed and evaluated for their transformation as well as how we can distribute them to the consumer and how we can integrate the new chemicals fuels and power within the current system and infrastructure the book takes a process based perspective with such an approach able to help us in the use and integration of these sources of energy and novel technologies
