### SUMMARY

This paper analyses and extends alternative procedures for converting qualitative expectations responses to quantitative expectations. A number of conversion procedures is investigated, including the probability model, the time-varying parameter probability model, and the regression approach. The informational content of the survey expectations is compared with simple time series models. It is found that the expectations models are superior for many series, both in terms of producing lower forecast root mean square error (RMSE) values and in detecting turning points in the actual data. Survey expectations are also tested for rational expectations in aggregate using the orthogonality test.

### 1. INTRODUCTION

Compared with indirect measures of the expectations formation process, direct measures have the distinct advantage of being either independent of or less reliant upon the specific model used to generate the expectations data. When direct measures are available only qualitatively, as in the case of some survey responses, a specific model is required to convert the qualitative expectations responses into a quantitative series for purposes of empirical analysis.

In this paper, both the probability method of Carlson and Parkin (1975) and the regression method of Pesaran (1984, 1987) are used to convert the qualitative response data into quantitative expectations series. These two conversion methods are extended by allowing expectations to have an asymmetric response to rises and falls in the actual variables. Responses are also allowed to vary over time through the use of the time-varying parameter probability model, thereby enabling different behaviour as economic conditions change, such as during periods of high or low growth, or of relative stability. The informational content of the expectations series is compared with simple time series models. It is found that the expectations models are superior for many series, both in terms of producing lower forecast root mean square error (RMSE) values and in detecting turning points in the actual data. Expectations series are also tested for consistency with the rational expectations hypothesis (REH), whereby there is no unexploited relevant information available in forming expectations. Since the expectations are generated through an auxiliary equation, the conventionally programmed ordinary least squares (OLS) standard errors used for the orthogonality test are incorrect.

The Preparation of Monetary Policy J.M. Berk, 2013-03-14 Standard macroeconomic monographs often discuss the mechanism of monetary transmission usually ending by highlighting the complexities and uncertainties involved in this mechanism Conversely The Preparation of Monetary Policy takes these uncertainties as a starting point analytically investigating their nature and spelling out their consequences for the monetary policy maker The second innovative aspect of this book is its focus on policy preparation instead of well covered topics such as monetary policy strategy tactics and implementation Thirdly a general multi model framework for preparing monetary policy is proposed which is illustrated by case studies stressing the role of international economic linkages and of expectations Written in a self contained fashion these case studies are of interest by themselves The book is written for an audience that is interested in the art and science of monetary policy making which includes central bankers academics and graduate students in the field of monetary economics macroeconomics international economics and finance
