*Airline Network Development in Europe and its Implications for Airport Planning* Guillaume Burghouwt,2016-03-23 The ongoing deregulation and liberalization of worldwide air transport markets confronts airport planners with an increasingly problematic context On the one hand the capital intensive large scale and complex airport investments need a detailed long medium term planning of airport infrastructure Such planning requires at least predictable traffic volumes and traffic composition within the planning horizon On the other hand airline route networks are increasingly dynamic structures that frequently show discontinuous changes As a consequence the much more volatile airport traffic restricts the value of detailed traffic forecasts Volatility of airport traffic and its composition requires flexibility of airport strategies and planning processes The book explores this dilemma through a detailed study of airline network development airport connectivity and airport planning in the deregulated EU air transport market The questions the book seeks to answer are how have airlines responded to the regime changes in EU aviation with respect to the configuration of their route networks what has been the impact of the reconfiguration of airline network configurations for the connectivity of EU airports how can airport planners and airport authorities deal with the increasingly uncertain airline network behaviour in Europe

**ITF Research Reports Liberalisation of Air Transport**

International Transport Forum,2019-05-03 Aviation is

one of the most regulated industries in the world Much of this regulation is safety related to mitigate the inherent risks tied with air transport But aviation is also subject to economic regulation that influences which airline flies which route at which frequency capacity and price It even stipulates the nationality of its owners and decision makers Aviation has freed itself from some restrictions over the past three decades with many benefits to society Yet liberalisation has also raised issues with regard to maintaining fair competition high labour standards and mitigating aviation's growing environmental impact

**The Regulation of Air Transport** Barry Humphreys, 2023-04-17 The regulation of modern civil aviation can be traced back to the later years of the Second World War An intense debate about the future regulatory regime resulted in a compromise which to this day essentially dictates the structure of the global airline industry Further progress towards normalising the industry appears to be slowing down and perhaps even going into reverse Without an understanding of the development of regulation it is not possible to understand

fully the industry's current problems and how they might be resolved. Many books have been written about the development of international air transport covering deregulation, privatisation, the emergence of new business models among other things, but few if any have taken a broad view of the trends which have determined the industry's current structure. *The Regulation of Air Transport* charts the development of aviation from the end of the Second World War to the present day, following the key trends and disruptive forces. It provides an overview of what has determined the industry's current structure, the problems still facing the industry, and the ways in which it could develop in the future. This wide-ranging study is important reading for both professionals and academics within the aviation field, as well as anyone interested in the broader development of economic regulation.

**Strategies for Sustainable Air Services Development** Chrystal Zhang, Kareem Yarde, 2024-12-02. Routes are arguably the most valuable of airline assets. Although widely practised in the industry, the process of developing air connectivity has drawn very limited academic research. However, this book fills in this knowledge gap. *Strategies for Sustainable Air Services Development* unwraps the process of decision making in establishing airlinks from the airline's perspective, as well as the roles of various stakeholders including airports, tourism authorities, tourist destination organizations, local investment agencies, and regional development agencies. Developed from rigorous academic research and analysis of a myriad of data sources that include interviews, surveys, and workshops with industry practitioners, it presents a framework of best practices that will serve as a toolkit and central resource point for industry professionals to initiate and establish airlinks to benefit air travellers and society at large. The first book of its kind, it presents the most comprehensive assessment available to date of all the intricacies involved in developing airlinks. The book will equip senior and middle managers, practitioners, policymakers, and students with the practical skills and tools required to develop and design airlinks for the benefit of all stakeholders.

*Global Airlines* James Patrick Hanlon, 2007. Provides comprehensive insight into today's global airline industry, now in its 3rd edition.

*Straight and Level* Stephen Holloway, 2016-12-14. This third edition of *Straight and Level* thoroughly updates the previous edition with extensive comments on recent industry developments and emerging business models. The discussion is illustrated by current examples drawn from all sectors of the industry and every region of the world. The fundamental structure of earlier editions, now widely used as a framework for air transport management courses, nonetheless remains unchanged. Part 1 of the book provides a strategic context within which to consider the industry's economics. Part 2 is built around a simple yet powerful model that relates operating revenue to operating cost; it examines the most important elements in demand and traffic, price and yield, output and unit cost. Part 3 probes more deeply into three critical aspects of capacity management: network management, fleet management, and revenue management. Part 4 concludes the book by exploring relationships between unit revenue, unit cost, yield, and load factor. *Straight and Level* has been written primarily for masters-level students on aviation management courses. The book should also be useful to final-year undergraduates wanting to prepare for more advanced study. Amongst practitioners, it will appeal

to established managers moving from functional posts into general management More broadly anyone with knowledge of the airline industry who wants to gain a deeper understanding of its economics at a practical level and an insight into the reasons for its financial volatility should find the book of interest      *Work in Tumultuous Times* Vivian Shalla,Wallace Clement,2007-03-12 Using a progressive approach to political economy contributors propose alternative policies and practices that might secure more decent livelihoods for workers and their families      **Working in a Global Era** Vivian Shalla,2011-10-03 Now in its second edition this reader presents a critical examination of the changing structure of work in Canada and abroad Its focus is on the role of Canadian labour in the globalized world Contributors include David Livingstone Pat Armstrong Meg Luxton Dave Broad and other prominent Canadian scholars Each of the seven themed sections begins with a contextual introduction by Vivian Shalla and concludes with critical thinking questions and suggestions for further reading New to this edition All new content 14 up to date chapters reflecting the current state of research on work in Canada New section on informal care work More workplace based chapters that provide a view from the shop floor
