hematologists internists and students **AIDS Bibliography**, 1993 *Biomarkers in Cardiovascular Diseases* Dimitris Tousoulis, Christodoulos Stefanadis, 2013-07-29 The establishment of precise and reliable biomarker tests for the early stages of cardiovascular disease is of great importance and can be the cornerstone in the prevention of future cardiovascular disease CVD Furthermore some biomarkers may provide important information concerning the pathogenesis of CVD or appear to be useful in risk stratification in CVD diagnosis or in monitoring therapy many others may be risk factors themselves representing therefore potential targets of therapy The ideal biomarker should have the following characteristics highly sensitive specific reliable accessible standardized dependable cost effective and easily interpretable by clinicians The present book focuses on the presentation and evaluation of the most promising classical and novel biochemical markers used in CVD coronary artery disease hypertension heart failure hyperlipidemia peripheral arterial disease The underlying pathophysiological characteristics of each biomarker as well as potential clinical implications in daily practice are reviewed in this book **Stem Cells and Progenitor Cells in Ischemic Stroke - Fashion or Future?** Thorsten R. Doeppner, Dirk M. Hermann, 2016-01-15 Stroke remains one of the most devastating diseases in industrialized countries Recanalization of the occluded arterial vessel using thrombolysis is the only causal therapy available However thrombolysis is limited due to severe side effects and a limited time window As such only a minority of patients receives this kind of therapy showing a need for new and innovative treatment strategies Although neuroprotective drugs have been shown to be beneficial in a variety of experimental stroke models they ultimately failed in clinical trials Consequently recent scientific focus has been put on modulation of post ischemic neuroregeneration either via stimulation of endogenous neurogenesis or via application of exogenous stem cells or progenitor cells Neurogenesis persists within the adult brain of both rodents and primates As such neural progenitor cells NPCs are found within distinct niches like the subventricular zone SVZ of the lateral ventricles and the subgranular zone of the dentate gyrus Cerebral ischemia stimulates these astrocyte like progenitor cells upon which NPCs proliferate and migrate towards the site of lesion There NPCs partly differentiate into mature neurons without significantly being integrated into the residing neural network Rather the majority of new born cells dies within the first weeks post stroke leaving post ischemic neurogenesis a phenomenon of unknown biological significance Since NPCs do not

replace lost brain tissue beneficial effects observed in some studies after either stimulated or protected neurogenesis are generally contributed to indirect effects of these new born cells The precise identification of appropriated cellular mediators however is still elusive How do these mediators work Are they soluble factors or maybe even vesicular structures emanating from NPCs What are the cues that guide NPCs towards the ischemic lesion site How can post ischemic neurogenesis be stimulated How can the poor survival of NPCs be increased In order to support post ischemic neurogenesis a variety of research groups have focused on application of exogenous stem progenitor cells from various tissue sources Among these cultivated NPCs from the SVZ and mesenchymal stem cells MSCs from the bone marrow are frequently administered after induction of stroke Although neuroprotection after delivery of stem progenitor cells has been shown in various experimental stroke models transplanted cells are usually not integrated in the neural network Again the vast amount of grafted cells dies or does not reach its target despite profound neuroprotection also suggesting indirect paracrine effects as the cause of neuroprotection Yet the factors being responsible for these observations are under debate and still have to be addressed Is there any optimal cell type for transplantation How can the resistance of grafted cells against a non favorable extracellular milieu be increased What are the molecules that are vital for interaction between grafted cells and endogenous NPCs The present research topic seeks to answer at least in part some of the aforementioned questions Although the research topic predominantly focuses on experimental studies and reviews alike a current outlook towards clinical relevance is given as well

Women in Virology: 2022 Ana Grande-Perez,Antoinette van der Kuyl,Christine A King,2023-08-15 In celebration of International Women s Day 2022 Frontiers in Microbiology are proud to launch this Women in Virology collection a dedicated Frontiers Research Topic aimed at celebrating the achievements of women in this field There is continued gender disparity in STEM field According to UNESCO Institute for Statistics just 30% of the world s researchers are women While the number of women attending university is growing they still represent the minority of doctoral students and researchers Women remain under represented in the highest level of academia holding just 26% of full professorships As highlighted by UNESCO science and gender equality are essential to ensure sustainable development

The Evidence for Neurosurgery Zoher Ghogawala,,Ajit A Krishnaney,,Michael P Steinmetz,,H Hunt Batjer,,Edward C Benzel,2012-10-01 This textbook aims to examine some of the most controversial areas of neurological surgery by applying the current evidence to illuminate our understanding of the pathophysiology of each disease and the outcomes from surgical and non surgical treatments The Evidence for Neurosurgery is a textbook that will challenge current dogmas in many instances provide an organized framework for understanding where current evidence can be applied clinically and illustrate where gaps in the evidence exist and how these deficiencies may be filled in the future In the first chapter Clinical Evidence the reader will gain an understanding of the levels of clinical evidence and will learn what types of study designs are appropriate and in which situations The textbook is then divided into six sections Spine Vascular Tumor Pediatrics Functional and Trauma
