Slope Economic benefits to the region have been accompanied by effects of the roads infrastructure and activities of oil and gas production on the terrain plants animals and peoples of the North Slope While attempts by the oil industry and regulatory agencies have reduced many of the environmental effects they have not been eliminated The book makes recommendations for further environmental research related to environmental effects *Arc-Continent Collision* Dennis Brown,Paul D. Ryan,2011-06-29 Arc continent collision has been one of the important tectonic processes in the formation of mountain belts throughout geological time and it continues to be so today along tectonically active plate boundaries such as those in the SW Pacific or the Caribbean Arc continent collision is thought to have been one of the most important process involved in the growth of the continental crust over geological time and may also play an important role in its recycling back into the mantle via subduction Understanding the geological processes that take place during arc continent collision is therefore of importance for our understanding of how collisional orogens evolve and how the continental crust grows or is destroyed Furthermore zones of arc continent collision are producers of much of the worlds primary economic wealth in the form of minerals so understanding the processes that take place during these tectonic events is of importance in modeling how this mineral wealth is formed and preserved This book brings together seventeen papers that are dedicated to the investigation of the tectonic processes that take place during arc continent collision It is divided into four sections that deal firstly with the main players involved in any arc continent collision the continental margin the subduction zone and finally the volcanic arc and its mineral deposits The second section presents eight examples of arc continent collisions that range from being currently active through to Palaeoproterozoic in age The third section contains two papers one that deals with the obduction of large slab ophiolites and a second that presents a wide range of physical models of arc continent collision The fourth section brings everything that comes before together into a discussion of the processes of arc continent collision
