Enlightenment to Enlightenment Henri Atlan, 1993-07-01 This book is a thorough and critical comparative analysis of the logic of modern scientific thought and of traditional teachings generally referred to as mythological and mystical Different rationalities with different domains of interest and legitimacy exist which should not be confused and cannot be unified in any theory of Ultimate Reality Atlan suggests they must coexist in practice although each of them presents itself as an exclusive and all encompassing truth The book introduces teachings from Jewish talmudic midrashic and kabbalist sources and text from Zen and Taoism to exemplify the kind of rationality or controlled irrationality at work in such traditional thinking

Science and Religion Lucas F. Johnston, Whitney Bauman, 2014-02-05 This collection offers new perspectives on the study of science and religion bringing together articles that highlight the differences between epistemological systems and call into question the dominant narrative of modern science The volume provides historical context for the contemporary discourse around religion and science detailing the emergence of modern science from earlier movements related to magic and other esoteric arts the impact of the Reformation on science and the dependence of Western science on the so called Golden Age of Islam In addition contributors examine the impacts of Western science and colonialism on the ongoing theft of the biological resources of traditional and indigenous communities in the name of science and medicine The volume s multi perspectival approach aims to refocus the terms of the conversation around science and religion taking into consideration multiple rationalities outside of the dominant discourse

change in the world Newton the Alchemist William R. Newman, 2018-12-11 A book that finally demystifies Newton's experiments in alchemy When Isaac Newton's alchemical papers surfaced at a Sotheby's auction in 1936 the quantity and seeming incoherence of the manuscripts were shocking No longer the exemplar of Enlightenment rationality the legendary physicist suddenly became the last of the magicians Newton the Alchemist unlocks the secrets of Newton's alchemical quest providing a radically new understanding of the uncommon genius who probed nature at its deepest levels in pursuit of empirical knowledge In this evocative and superbly written book William Newman blends in depth analysis of newly available texts with laboratory replications of Newton's actual experiments in alchemy He does not justify Newton's alchemical research as part of a religious search for God in the physical world nor does he argue that Newton studied alchemy to learn about gravitational attraction Newman traces the evolution of Newton's alchemical ideas and practices over a span of more than three decades showing how they proved fruitful in diverse scientific fields A precise experimenter in the realm of chemistry Newton put the riddles of alchemy to the test in his lab He also used ideas drawn from the alchemical texts to great effect in his optical experimentation In his hands alchemy was a tool for attaining the material benefits associated with the philosopher's stone and an instrument for acquiring scientific knowledge of the most sophisticated kind Newton the Alchemist provides rare insights into a man who was neither Enlightenment rationalist nor irrational magus but rather an alchemist who sought through experiment and empiricism to alter nature at its very heart

The Future of Post-Human Chemistry Peter Baofu, 2011-08-08 Is chemistry really so valuable that as Theodore L Brown 2011 and his colleagues continue to claim in the twelfth edition of their work in 2011 chemistry is the central science in connecting the physical sciences with the life and applied sciences WK 2011 C Reinhardt 2001 This crowning of chemistry however can be contrasted with an opposing view as Michael Polanyi once questioned the centrality of chemistry when he wrote that no inanimate object is ever fully determined by the laws of chemistry so other fields of study are just as important BQ 2011 Contrary to these conflicting views about chemistry and other ones discussed in the book chemistry in relation to substances and their changes is neither possible nor desirable to the extent that the respective ideologues on different sides would like us to believe This challenge to the conflicting views about chemistry does not mean however that chemistry is useless or that those fields of study related to chemistry like astronomy physics geology mathematics material science biology psychology computer science and so on should be ignored too Of course neither of these extreme views is reasonable Instead this book provides an alternative better way of understanding the future of chemistry especially in the dialectic context of substances and their changes while learning from different approaches in literature but without favoring any one of them or integrating them since they are not necessarily compatible with each other This book offers a new theory that is the creational theory of chemistry to go beyond the existing approaches to literature in an original way If successful this seminal project will fundamentally change the way that we think about chemistry from the combined perspectives of the mind nature society and

culture with enormous implications for the human future and what the author originally called its post human fate
