British Coastal Forces Norman Friedman, 2023-04-30 The Royal Navy invented the fast motor torpedo boat during the First World War and used it and other small coastal craft to great effect during the Second This book tells the dramatic story of British coastal forces both offensive and defensive in both World Wars and beyond In the Second World War British coastal forces fought a desperate battle to control the narrow seas particularly the Channel and the North Sea and took the war to the coasts of German occupied Europe fighting where larger warships could not be risked They also made a significant contribution to victory in the Mediterranean but it was primarily warfare in home waters that shaped wartime British Coastal Forces and left lessons for postwar development In this book Norman Friedman uniquely connects the technical story of the coastal craft and their weapons and other innovations with the way they fought In both world wars much of the technology was at the edge of what was feasible at the time Boats incorporated considerable British innovation and also benefited from important US contributions particularly in supplying high powered engines during World War II In contrast with larger warships British coastal forces craft were essentially shaped by a few builders and their part in the story is given full credit They also built a large number of broadly similar craft for air sea rescue and for completeness these are described in an appendix This fascinating dramatic story is also relevant to modern naval thinkers concerned with gaining or denying access to hostile shores The technology has changed but the underlying realities have not This book includes an extensive account of how coastal forces supported the biggest European example of seizing a defended shore the Normandy invasion That was by far the largest single British coastal forces operation demanding a wide range of innovations to make it possible Like other books in this series this one is based very heavily on contemporary official material much of which has not been used previously like the extensive reports of US naval observers who were allowed wide access to the Royal Navy as early as 1940 Combined with published memoirs these sources offer a much more complete picture than has previously appeared of how Coastal Forces fought and of the way in which various pressures both operational and industrial shaped them

British Naval Trawlers and Drifters in Two World Wars Steve Dunn,2021-12-30 John Lambert was a renowned naval draughtsman whose plans were highly valued for their accuracy and detail by modelmakers and enthusiasts By the time of his death in 2016 he had produced over 850 sheets of drawings many of which have never been published These were acquired by Seaforth and this title is the fourth of a planned series of albums on selected themes reproducing complete sheets at a large page size with expert commentary and captioning Trawlers and drifters served in both world wars in their thousands and in their tens of thousands so did their fishermen crews Indeed these humble craft were the most numerous vessel type used by the Royal Navy in both wars and were the answer to the strategic or tactical conundrums posed by new technology of mines and submarines In his accompanying text Steve Dunn examines the ships themselves their design construction arming operations and development and he also relates how the trawlermen and skippers from the age old fishing ports of Grimsby Hull Lowestoft ad Great Yarmouth Aberdeen and Fleetwood came to be part of the Royal Navy and describes the roles they played the conditions they served under and the bravery they showed The book takes some 30 large sheets of drawings which John Lambert completed of these vessels and divides into two sections The first part tells how the fishing fleet came to be an integral part of the Royal Navy s pre 1914 plans and details some of the activities and actions of trawlers and drifters at war in 1914 18 And the second investigates the armed fishing fleet in the struggle of 1939 45 These wonderfully detailed drawings which are backed by a selection of photographs and a detailed complementary text offer a superb technical archive for enthusiasts and ship modellers but the book also tells a fascinating story of the extraordinary

Reynolds, 2000 This third and final volume in the Royal Navy Coastal Forces trilogy offers eyewitness accounts of operations in the English Channel and North Sea by the Royal Navy's short MTBs and MGBs during World War II. The chronological account also traces the evolution of tactics and strategies, boat construction, training and administration. It demonstrates dramatically the difference between the boats which began the war and those which finished it. *A Bridge of Ships* James S. Pritchard, 2011 The second World War dramatically affected Canada's shipbuilding industry. James Pritchard describes the rapidly changing circumstances and personalities that shaped government shipbuilding policy, the struggle for steel, the expansion of ancillary industries and the cost of Canadian wartime ship production. *Naval Warfare 1919-45* Malcolm H. Murfett, 2008-11-04 *Naval Warfare 1919-45* is a comprehensive history of the war at sea from the end of the Great War to the end of World War Two. Showing the bewildering nature and complexity of the war facing those charged with fighting it around the world, this book ranges far and wide, sweeping across all naval theatres and those powers performing major as well as minor roles within them. Armed with the latest material from an extensive set of sources, Malcolm H. Murfett has written an absorbing as well as a comprehensive reference work. He demonstrates that superior equipment and the best intelligence, ominous power and systematic planning, vast finance and suitable training are often simply not enough in themselves to guarantee the successful outcome of a particular encounter at sea. Sometimes the narrow difference between victory and defeat hinges on those infinite variables: the individual's performance under acute pressure and sheer luck. *Naval Warfare 1919-45* is an analytical and interpretive study which is an accessible and fascinating read both for students and for interested members of the general public.

Splinter Fleet Theodore R. Treadwell, 2013-11-12 Hastily built at the onset of World War II to stop German U-boats from taking their toll on Allied shipping, the 110-foot wooden subchasers were the smallest commissioned warships in the U.S. Navy, yet they saw as much action as ships ten times their size. In every theater of war, these expendable workhorses of the fleet escorted countless convoys of slow-moving ships through submarine-infested waters, conducted endless mind-numbing antisubmarine patrols and were used in hundreds of amphibious operations. Some subchasers worked as gunboats to search for and destroy enemy barges. Others rescued downed airmen and retrieved drowning soldiers under heavy enemy fire. During the German occupation of Norway, three American-built subchasers and their Norwegian crews came to be known as The Shetlands Bus for their clandestine work as ferries, the only link between Norway and the free world. This book, written by the commander of one of the subchasers, defines their place in naval history and gives readers a taste of life on board the wooden warships. Ringing with authenticity, it describes the cramped quarters and unforgiving seas as well as the tenacious courage and close bonds formed by the men as they sought out the enemy and confronted nature. Long overshadowed by the larger, faster warships and more glamorous PT boats of World War II, subchasers have been mostly forgotten. This work restores the plucky little ships to their hard-earned status as significant members of the fleet. **Railway Hotels** Michael

Patterson,2016-09-15 A wonderfully evocative guide to the history and the architecture of Britain s railway station hotels
