Alzheimer's disease is one of the biggest emerging public health problems in the world. Although the last four decades have yielded important insights into the pathogenesis of Alzheimer's disease, its cause is still unclear, and if it is not discovered, the world will face an unprecedented healthcare problem by the middle of this century. In recent years, evidence of the microbial origin of various chronic inflammatory disorders, including several neurodegenerative, neuropsychiatric, and other systemic disorders, has been steadily growing. Accumulating new and historic observations are providing evidence of an association between Alzheimer's disease and certain infectious agents and may offer new opportunities for ground-breaking healthcare solutions. This handbook assembles and connects findings with regard to the infectious origin of Alzheimer's disease, and the data presented in its chapters deserves the attention of the neuroscience community, physicians, and the health departments of governments worldwide by virtue of its amount and quality. This handbook offers a comprehensive overview of the current knowledge regarding the topic of infection and Alzheimer's disease, which could pinpoint the cause of this disease. Influential diagnosis, treatment, and prevention strategies may also emerge from this crucial research area.

Handbook of Depression in Alzheimer's Disease G.S. Smith, 2015-08-05. Advances in healthcare have led to an extended life expectancy throughout the developed world, but cognitive impairment in later life and Alzheimer's disease (AD) in particular remains one of the intractable problems which can blight quality of life as we age. Depression in Alzheimer's disease is an additional factor which has a significant impact on disability, disease progression, and caregiver burden. This book, volume 4 of the *Advances in Alzheimer's Disease* book series, which is published in coordination with the *Journal of Alzheimer's Disease*, presents papers which reflect the progress in recent years of research into depression in AD. This research has focused on several areas, including the improvement of diagnostic criteria and outcome measures for depression and depressive symptoms in AD; genetic and imaging studies to elucidate the neurobiological mechanisms; and clinical trials of antidepressants. The book is divided into sections on phenomenology, epidemiology, neuropsychology, neurobiology, and neuropathology, neuroimaging, genetics, and treatment. Providing a stimulus to further research in this challenging area by engaging both basic and clinical researchers, this book will be of interest to all those whose work involves understanding and dealing with depression in those suffering from Alzheimer's disease.
