Covalently Bonded Disordered Thin-Film Materials: Volume 498 M. P. Siegel, W. I. Milne, J. E. Jaskie, 1998-04-22 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners

Physico-Chemical Phenomena in Thin Films and at Solid Surfaces, 2007-06-07 The book is devoted to the consideration of the different processes taking place in thin films and at surfaces Since the most important physico chemical phenomena in such media are accompanied by the rearrangement of an intra and intermolecular coordinates and consequently a surrounding molecular ensemble the theory of radiationless multi vibrational transitions is used for its description The second part of the book considers the numerous surface phenomena And in the third part is described the preparation methods and characteristics of different types of thin films Both experimental and theoretical descriptions are represented Media rearrangement coupled with the reagent transformation largely determines the absolute value and temperature dependence of the rate constants and other characteristics of the considered processes These effects are described at the atomic or molecular level based on the multi phonon theory starting from the first pioneering studies through to contemporary studies A number of questions are included at the end of many chapters to further reinforce the material presented Unified approach to the description of numerous physico chemical phenomena in different materials Based on the pioneering research work of the authors Explanation of a variety of experimental observations Material is presented at two levels of complexity for specialists and non specialists Identifies existing and potential applications of the processes and phenomena Includes questions at the end of some chapters to further reinforce the material discussed Tetrahedrally Bonded Amorphous Carbon Films I Bernd Schultrich, 2018-03-10 This book presents the status quo of the structure preparation properties and applications of tetrahedrally bonded amorphous carbon ta C films and compares them with related film systems Tetrahedrally bonded amorphous carbon films ta C combine some of the outstanding properties of diamond with the versatility of amorphous materials The book compares experimental results with the predictions of theoretical analyses condensing them to practicable rules It is strictly application oriented emphasizing the exceptional potential of ta C for tribological coatings of tools and components *Cold Cathodes* M. Cahay, 2001 Thin-Film Structures for Photovoltaics: Volume 485 Eric D. Jones, 1998 Contains 49 papers from the December 1997 symposium The contributions are organized into three sections devoted to silicon II VI and III V based thin films as well as a section on general thin films A number of processes are dealt with including VEST ion beam plasma laser low temperature sputter and metalorganic chemical vapor depositions and various growth techniques In addition analysis and modeling methodologies are discussed Annotation copyrighted by Book News Inc Portland OR **Semiconductor Process and Device Performance Modelling: Volume 490** Scott T.
