Theory C.A. Hooker, 2012-12-06 To mathematicians mathematics is a happy game to scientists a mere tool and to

philosophers a Platonic mystery or so the caricature runs The caricature reflects the alleged cultural gap between the

disciplines a gap for which there too often has been sadly sound historical evidence In many minds the lack of communication

between philosophy and the exact disciplines is especially prominent Yet in the past there was no separation exact

knowledge covering both scientists and mathematicians was known as natural philosophy and the business of providing a

critical view of the nature of reality and an accurate mathematical description of it constituted a single task from the

glorious tradition begun by the early Greek philosophers even up until Newton's day but I am thinking of Descartes and

Leibniz I The lack of communication between these professional groups has been particularly unfortunate for the past half

century has seen the most exciting developments in mathematical physics since Newton These developments hinged on the

introduction of vast new reaches of mathematics into physics non Euclidean geometries covariant formulations non commutative algebras functional analysis and so on and conversely have challenged mathematicians to develop the appropriate mathematical fields Equally these developments have posed profound philosophical problems to do with the rejection of traditional conceptions concerning the nature of physical reality and physical theorising
