Laser Material Processing William M. Steen, Jyotirmoy Mazumder, 2010-11-30 The informal style of Laser Material Processing 4th Edition will guide you smoothly from the basics of laser physics to the detailed treatment of all the major materials processing techniques for which lasers are now essential. Helps you to understand how the laser works and to decide which laser is best for your purposes. New chapters on laser physics, drilling, micro and nanomanufacturing and biomedical laser processing reflect the changes in the field since the last edition, updating and completing the range of practical knowledge about the processes possible with lasers already familiar to established users of this well known text. Provides a firm grounding in the safety aspects of laser use. Now with end of chapter exercises to help students assimilate information as they learn. The authors' lively presentation is supported by a number of original cartoons by Patrick Wright and Noel Ford which will bring a smile to your face and ease the learning process. *Bipolar Disorder* Lakshmi N. Yatham, Mario Maj, 2011-06-28 Bipolar Disorder Bipolar disorder is the most complex psychiatric disorder with different types of mood episodes, subtypes, varied course and significant comorbidity. Not surprisingly, this complexity poses unique challenges to clinicians for optimal management of those with bipolar disorder. There has been an explosion of research into the causes and treatment of this condition over the past two decades. It is a daunting task for a practising clinician to make sense of this research and to remain up to date with progress in the understanding of the neurobiology and treatment of bipolar disorder. This book synthesizes and translates the vast array of research knowledge into information that is both relevant and meaningful for a clinician. The book provides a comprehensive yet focused reference work on bipolar disorder for both trainees and practising psychiatrists. The two editors are leaders in the field who have published extensively on bipolar disorder. They have assembled a team of experts from around the world in many instances; chapters are co-authored by people from different continents, bringing a truly international perspective to this important topic. The book covers the basic science of the pathology underlying bipolar disorder but addresses the clinical aspects of the disease throughout. The book comprises four sections: Descriptive Aspects, issues ranging from how the concept of bipolar disorder has evolved over the years to new information about neurocognitive impairment, creativity and economic productivity and to discussion of the deliberations of the DSM V committee on changes in diagnostic categories and criteria; Biological Aspects, the contribution of genes to this disorder, changes in circadian rhythms, what we know about brain changes and the role of oxidative stress; Management, all the latest information about pharmacological and other somatic treatments plus psychological therapies for the optimal management of this condition; Special Populations, detailed descriptions of bipolar disorder in women, children and the elderly. If you want to provide state of the art care to your bipolar patients, be sure to consult this authoritative reference. **Scientific and Technical Aerospace Reports**, 1986 **Literacy Assessment and Instructional Strategies** Kathy B.
