The Cracked Spine Paige Shelton, 2016-03-29 Wanted A bold adventurer who wants to travel the world from a comfortable and safe spot behind a desk that has seen the likes of kings and queens paupers and princes A humble book and rare manuscript shop seeks a keenly intelligent investigator to assist us in our search for things thought lost and in our quest to return lost items to their rightful owners Never an adventurer no one was more surprised than Delaney Nichols when she packed her bags and moved halfway across the world to Edinburgh Scotland to start a job at The Cracked Spine a bookshop located in the heart of the city Her new boss Edwin MacAlister has given her the opportunity of a lifetime albeit a cryptic one and Delaney can't wait to take her spot behind the desk The Cracked Spine is filled with everything a book lover could want each item as eclectic as the people who work there the spirited and lovable Rosie who always has tiny dog Hector in tow Hamlet a nineteen year old thespian with a colored past and bright future and Edwin who is just as enigmatic and mysterious as Delaney expected An extra bonus is Tom the bartender from across the street with his cobalt eyes and a gentle brogue and it doesn't hurt that he looks awfully good in a kilt But before she can settle into her new life a precious artifact goes missing and Edwin's sister is brutally murdered Never did Delaney think that searching for things lost could mean a killer but if she's to keep her job and protect her new friends she'll need to learn the truth behind this Scottish tragedy

Biomimetic Research for Architecture and Building Construction Jan Knippers, Klaus G. Nickel, Thomas Speck, 2016-12-19 This book comprises a first survey of the Collaborative Research Center SFB TRR 141 Biological Design and Integrative Structures Analysis Simulation and Implementation in Architecture funded by the Deutsche Forschungsgemeinschaft since October 2014 The SFB TRR 141 provides a collaborative framework for architects and engineers from the University of Stuttgart biologists and physicists from the University of Freiburg and geoscientists and evolutionary biologists from the University of Tübingen The program is conceptualized as a dialogue between the disciplines and is based on the belief that that biomimetic research has the potential to lead everyone involved to new findings far beyond his individual reach During the last few decades computational methods have been introduced into all fields of science and technology In architecture they enable the geometric differentiation of building components and allow the fabrication of porous or fibre based materials with locally adjusted physical and chemical properties Recent developments in simulation technologies focus on multi scale models and the interplay of mechanical phenomena at various hierarchical levels In the natural sciences a multitude of quantitative methods covering diverse hierarchical levels have been introduced These advances in computational methods have opened a new era in biomimetics local differentiation at various scales the main feature of natural constructions can for the first time not only be analysed but to a certain extent also be transferred to building construction Computational methodologies enable the direct exchange of information between fields of science that until now have been widely separated As a result they lead to a new approach to biomimetic research which hopefully contributes to a more sustainable

development in architecture and building construction
