Pharmacokinetics of the active metabolite, 2-hydroxy-*trans*-2-methyl-3-methylbutyrate, in patients with normal renal function and patients with renal impairment. The pharmacokinetics of the active metabolite were studied in patients with normal renal function and patients with renal impairment. The results are shown in Table 1. The half-life of the active metabolite was significantly longer in patients with renal impairment than in patients with normal renal function. The clearance of the active metabolite was significantly lower in patients with renal impairment than in patients with normal renal function. The volume of distribution of the active metabolite was not significantly different between the two groups.

**Hemoglobin-Based Oxygen Carriers as Red Cell Substitutes and Oxygen Therapeutics** Hae Won Kim, A. Gerson Greenburg, 2013-12-18 Currently hemoglobin Hb based oxygen carriers HBOCs are leading candidates as red blood cell substitutes. In addition HBOCs are also potential oxygen therapeutics for treatment of patients with critical ischemic conditions due to atherosclerosis, diabetes, and other conditions. This book will provide readers a comprehensive review of topics involved in the HBOC development. It focusses on current products and clinical applications as well as on emerging technologies and future prospects. Biomaterials Science Buddy D. *Biomedical Index to PHS-supported Research*, 1987 *Biomaterials in Regenerative Medicine and the Immune System* Laura Santambrogio, 2015-09-04 The generation of tridimensional tissues assembled from scaffolding materials populated with biologically functional cells is the great challenge and hope of tissue bioengineering and regenerative medicine. The generation of biomaterials capable of harnessing the immune system has been particularly successful. This book provides a comprehensive view of how immune cells can be manipulated to suppress inflammation, deliver vaccines, fight cancer cells, promote tissue regeneration, or inhibit blood clotting and bacterial infections by functionally engineered biomaterials. However, long lived polymers such as those employed in orthopedic surgery or vascular stents can often induce an immune reaction to their basic components. As a result, this book is also an important step towards coming to understand how to manipulate biomaterials to optimize their beneficial effects and downplay detrimental immune responses. *The Medical Department of the United States Army in World War II*. Tsuchida, Hirohisa Horinouchi, 2006-03-16 This volume of the Keio University International Symposia for Life Sciences and Medicine contains the proceedings of the 13th symposium held under the sponsorship of the Keio University Medical Science Fund. The fund was established by the generous donation of the late Dr Mitsunada Sakaguchi. The Keio University International Symposia for Life Sciences and Medicine constitute one of the core activities sponsored by the fund of which the objective is to contribute to the international community by developing human resources, promoting scientific knowledge, and encouraging mutual exchange. Each year the Committee of the International Symposia for Life Sciences and Medicine selects the most significant symposium topics from applications received from the Keio medical community. The publication of the proceedings is intended to publicize and distribute the information arising from the lively discussions of the most exciting and current issues presented during the symposium. On behalf of the Committee, I am most grateful to the late Dr Sakaguchi who made the series of symposia possible. We are also grateful to the prominent speakers for their contribution to this volume. In addition, we would like to acknowledge the efficient organizational work performed by the members of the program committee and the staff of the fund.
