**Bluejacket Admiral** John T. Hayward, Carl W. Borklund, 2000 Navy go significantly beyond that period History of Acquisition in the Department of Defense, Volume 1 Elliott V. Converse, 2012-06-12 This volume is a history of the acquisition of major weapon systems by the United States armed forces from 1945 to 1960 the decade and a half that spanned the Truman and Eisenhower administrations following World War II These instruments of warfare aircraft armored vehicles artillery guided missiles naval vessels and supporting electronic systems when combined with nuclear warheads gave the postwar American military unprecedented deterrent and striking power 1 They were also enormously expensive The volume is organized chronologically with individual chapters addressing the roles of OSD the Army Navy and Air Force in two distinct periods The first roughly coinciding with President Truman's tenure covers the years from the end of World War II through the end of the Korean War in 1953 The second spans the two terms of the Eisenhower presidency from 1953 through early 1961 The year 1953 marked a natural breakpoint between the two periods The Korean War had ended President Eisenhower and his defense team began implementing the New Look a policy and strategy based on nuclear weapons which they believed would provide security and make it possible to reduce military spending The New Look's stress on nuclear weapons along with the deployment of the first operational guided missiles and the rapid advances subsequently made in nuclear and missile technology profoundly influenced acquisition in the services throughout the 1950s and the remainder of the century As used in this study the term acquisition encompasses the activities by which the United States obtains weapons and other equipment In surveying the history of acquisition between 1945 and 1960 this study discusses or refers in passing to many of the hundreds of weapon system programs initiated by the services in that period but it is not a weapons encyclopedia Instead it investigates a few major programs in depth in the belief that such detailed examination best reveals the evolution of acquisition policies organizations and processes and the various forces influencing weapons programs

*Getting MAD: Nuclear Mutual Assured Destruction, Its Origins and Practice*, 2004 Nearly 40 years after the concept of finite deterrence was popularized by the Johnson administration nuclear Mutual Assured Destruction MAD thinking appears to be in decline The United States has rejected the notion that threatening population centers with nuclear attacks is a legitimate way to assure deterrence Most recently it withdrew from the Anti Ballistic Missile Treaty an agreement based on MAD American opposition to MAD also is reflected in the Bush administration's desire to develop smaller more accurate nuclear weapons that would reduce the number of innocent civilians killed in a nuclear strike Still MAD is influential in a number of ways First other countries like China have not abandoned the idea that holding their adversaries cities at risk is necessary to assure their own strategic security Nor have U S and allied security officials and experts fully abandoned the idea At a minimum acquiring nuclear weapons is still viewed as being sensible to face off a hostile neighbor that might strike one's own cities Thus our diplomats have been warning China that Japan would be under tremendous pressure to go nuclear

if North Korea persisted in acquiring a few crude weapons of its own Similarly Israeli officials have long argued without criticism that they would not be second in acquiring nuclear weapons in the Middle East Indeed given that Israelis surrounded by enemies that would not hesitate to destroy its population if they could Washington finds Israel's retention of a significant nuclear capability totally understandable      *Rearming for the Cold War, 1945-1960* Elliott Vanveltner Converse, 2012 Book Description The first publication in a multivolume series on the history of the acquisition of major weapon systems by the Department of Defense author Elliott Converse presents a meticulously researched overview of changes in acquisition policies organizations and processes within the United States military establishment during the decade and a half following World War II Many of the changes that shaped the nature and course of weapons research and development production and contracting through the end of the century were instituted between 1945 and 1960 many of the problems that have repeatedly challenged defense policymakers and acquisition professionals also first surfaced during these years This study is the first to combine the histories of the Office of the Secretary of Defense OSD and the military services into one account The volume is organized chronologically with individual chapters addressing the roles of OSD the Army Navy and Air Force in two distinct periods      **Getting MAD** Henry D. Sokolski, 2004 Getting MAD Nuclear Mutual Assured Destruction Its Origins and Practice is the first critical history of the intellectual roots and actual application of the strategic doctrine of nuclear mutual assured destruction or MAD Written by the world's leading French British and American military policy planners and analysts this volume examines how MAD and its emphasis on the military targeting of population centers influenced the operational plans of the major nuclear powers and states such as Pakistan India and Israel Given America's efforts to move away from MAD and the continued reliance on MAD thinking by smaller nations to help justify further nuclear proliferation Getting MAD is a timely must read for anyone eager to understand our nuclear past and future      **Racing for the Bomb** Robert S. Norris, 2014-10-21 In September 1942 Colonel Leslie R Groves was given the job of building the atomic bomb As a career officer in the Army Corps of Engineers Groves had overseen hundreds of military construction projects including the Pentagon Until now scientists have received the credit for the Manhattan Project's remarkable achievements And yet it was Leslie R Groves who made things happen It was Groves who drove manufacturers construction crews scientists industrialists and military and civilian officials to come up with the money the materials and the plans to solve thousands of problems and build the bomb in only two years It was his operation and in *Racing for the Bomb* he emerges as a take charge can do figure who succeeds in the face of formidable odds Revealed for the first time in *Racing for the Bomb* Groves played a crucial and decisive role in the planning timing and targeting of the Hiroshima and Nagasaki missions Norris offers new insights into the complex and controversial questions surrounding the decision to drop the bomb in Japan and Groves's actions during World War II which had a lasting imprint on the nuclear age and the Cold War that followed Groves's extensive influence on key institutions of postwar America has been overlooked for too long In this full scale biography which

includes archival material and family letters and documents and features several previously unpublished photographs Norris places Groves at the center of the amazing Manhattan Project story Skyhorse Publishing along with our Arcade Good Books Sports Publishing and Yucca imprints is proud to publish a broad range of biographies autobiographies and memoirs Our list includes biographies on well known historical figures like Benjamin Franklin Nelson Mandela and Alexander Graham Bell as well as villains from history such as Heinrich Himmler John Wayne Gacy and O J Simpson We have also published survivor stories of World War II memoirs about overcoming adversity first hand tales of adventure and much more While not every title we publish becomes a New York Times bestseller or a national bestseller we are committed to books on subjects that are sometimes overlooked and to authors whose work might not otherwise find a home **Deciding to Buy** Quentin E.

Hodgson,2010 The development and procurement of major weapons programs in the United States is a complex and often drawn out process complicated by political considerations and often sharp disagreements over requirements and the merits of systems Secretaries of Defense since Robert McNamara have sought to impose discipline on the process with varying degrees of success Conflicts between a Military Service and the civilian leadership are inevitable A Service wants to develop the most advanced system to address its perceived need whereas the Secretary of Defense must balance competing requirements across the Department of Defense The military and the civilian leadership may also have different strategic perspectives that feed this conflict Through the detailed analysis of three case studies the Nuclear Surface Navy in the 1960s the B 1 Bomber in the 1970s and the Crusader Artillery System in the 2000s the author explores some of the common themes and sources of friction that arise in civil military relations concerning major weapons programs He concludes with some thoughts on how the Secretary of Defense can anticipate and reduce these sources of friction while retaining an environment that supports healthy debate P ix Naval War College Review ,2011 **The Journal of Military History** ,2001
