The Gordian Knot W. Russell Neuman,Richard Jay Solomon,Lee W. McKnight,1999-07-26 Veterans of the high definition TV wars of the 1980s the authors social scientists as well as technologists came to see themselves as chroniclers and students of an intriguing and serious techno economic conflict Why they asked did so few understand the rules of the game In a broad account accessible to generalist and specialist alike they address the current national debate about the

development of a national information infrastructure locating the debate in a broad historical narrative that illuminates how we got here and where we may be going and outlining a bold vision of an open communications infrastructure that will cut through the political gridlock that threatens this information highway Technical change the authors argue is creating a new paradigm that fits neither the free market nor regulatory control models currently in play They detail what is wrong with the political process of the national information infrastructure policy making and assess how different media systems telecommunications radio television broadcasting were originally established spelling out the technological assumptions and organizational interests on which they were based and showing why the old policy models are now breaking down The new digital networks are not analogous to railways and highways or their electronic forebears in telephony and broadcasting they are inherently unfriendly to centralized control of any sort so the old traditions of common carriage and public trustee regulation and regulatory gamesmanship no longer apply The authors technological and historical analysis leads logically toward a policy proposal for a reformed regulatory structure that builds and protects meaningful competition but that abandons its role as arbiter of tariffs and definer of public service and public interest

Media Economics Alison Alexander, James Owers, Rod Carveth, 1998 The importance of media economics became apparent in the massive business reorganizations of the 1980s and the 1990s Due to regulatory technological and financial changes media became the target of takeovers breakups mergers and acquisitions Media economics became much more than understanding cash flow within a single business organization This book is designed to focus on the principles of economics in the business sector and to apply them to specific media industries It examines the process of media economics decision making through an exploration of such topics as industrial restructuring regulatory constraints upon media operations and changing economic value The first part of this book focuses on the concerns of media economics the techniques of economic and business analysis and overall characteristics of the rapidly changing media environment The second part examines economic practice within specific media industries

Radio's Digital Dilemma John Nathan Anderson, 2013-12-04 Radio's Digital Dilemma is the first comprehensive analysis of the United States digital radio transition chronicling the technological and

policy development of the HD Radio broadcast standard A story laced with anxiety ignorance and hubris the evolution of HD Radio pitted the nation s largest commercial and public broadcasters against the rest of the radio industry and the listening public in a pitched battle over defining the digital future of the medium The Federal Communications Commission has elected to put its faith in marketplace forces to govern radio s digital transition but this has not been a winning strategy a dozen years from its rollout the state of HD Radio is one of dangerous malaise especially as newer digital audio distribution technologies fundamentally redefine the public identity of radio itself Ultimately Radio s Digital Dilemma is a cautionary tale about the overarching influence of economics on contemporary media policymaking to the detriment of notions such as public ownership and access to the airwaves and a call for media scholars and reformers to engage in the continuing struggle of radio s digital transition in hopes of reclaiming these important principles Communication Yearbooks Vols 6-33 Set Various,2021-12-02 The Communication Yearbook annuals originally published between 1977 and 2009 publish diverse state of the discipline literature reviews that advance knowledge and understanding of communication systems processes and impacts across the discipline Topics dealt with include Communication as Process Research Methodology in Communication Communication Effects Taxonomy of Communication and European Communication Theory Information Systems Division Mass Communication Research Mapping the Domain of Intercultural Communication Public Relations Feminist Scholarship Communication Law and Policy Visual Communication Communication and Cross Sex Friendships Across the Life Cycle Television Programming and Sex Stereotyping InterCultural Communication Training Leadership and Relationships Media Performance Assessment Cognitive Approaches to Communication **Entertainment Law Reporter** ,1995 Motion pictures television radio music theater publishing sports Radio Without Sponsors Mark Jonathan Heistad,1998 **Arts & Humanities Citation Index** ,1996 A multidisciplinary index covering the journal literature of the arts and humanities It fully covers 1 144 of the world s leading arts and humanities journals and it indexes individually selected relevant items from over 6 800 major science and social science journals *Official Program ...
