Green Energy Suman Lata Tripathi, Sanjeevikumar Padmanaban, 2021-02-17 Like most industries around the world the energy industry has also made and continues to make a long march toward green energy. The science has come a long way since the 1970s and renewable energy and other green technologies are becoming more and more common, replacing fossil fuels. It is however still a struggle both in terms of energy sources keeping up with demand and the development of useful technologies in this area. To maintain the supply for electrical energy, researchers, engineers, and other professionals in industry are continuously exploring new eco-friendly energy technologies and power electronics such as solar, wind, tidal, wave, bioenergy, and fuel cells. These technologies have changed the concepts of thermal, hydro, and nuclear energy resources by the adaption of power electronics advancement and revolutionary development in lower manufacturing cost for semiconductors with long time reliability. The latest developments in renewable resources have proved their potential to boost the economy of any country. Green energy technology has not only proved the concept of clean energy but also reduces the dependencies on fossil fuel for electricity generation through smart power electronics integration. Also, endless resources have more potential to cope with the requirements of smart building and smart city concepts. A valuable reference for engineers, scientists, chemists, and students, this volume is applicable to many different fields across many different industries at all levels. It is a must have for any library.

Innovations in Non-Conventional Energy Sources Krishan Arora, Himanshu Sharma, 2025-10-01 This book focuses on exploring and showcasing advancements, breakthroughs, and emerging technologies in the field of energy generation and utilization, particularly those related to non-conventional or alternative energy sources. It delves into various non-conventional energy sources such as solar, wind, geothermal, tidal, and biomass and aims to provide in-depth insights into the technologies associated with these sources. It discusses innovative approaches, recent developments, and technological breakthroughs within the realm of non-conventional energy sources, addressing the environmental benefits of these energies while highlighting their potential to reduce greenhouse gas emissions, combat climate change, and promote sustainable energy practices. This book provides real-world examples and case studies of successful non-conventional energy projects. It takes an interdisciplinary approach by integrating knowledge from various fields such as engineering, environmental science, economics, and policy, offering a holistic understanding of the subject. It emphasizes the environmental benefits of non-conventional energy sources and their contributions to reducing carbon emissions and combating climate change. It discusses the policies, regulations, and government incentives that influence the adoption of non-conventional energy sources, explaining how these factors can drive innovation. It includes a global perspective by showcasing innovations and projects from different

regions and highlighting how various countries are approaching renewable energy It serves as a comprehensive resource for researchers professionals policymakers and anyone interested in understanding the latest innovations and trends in the field of non conventional energy sources with an emphasis on sustainability environmental responsibility and energy security

Advanced Power Electronics Converters for Future Renewable Energy Systems Neeraj Priyadarshi, P. Sanjeevikumar, Farooque Azam, C. Bharatiraja, Rajesh Singh, 2023-03-31 This book narrates an assessment of numerous advanced power converters employed on primitive phase to enhance the efficiency of power translation pertaining to renewable energy systems It presents the mathematical modelling analysis and control of recent power converters topologies namely AC DC DC DC and DC AC converters Numerous advanced DC DC Converters namely multi input DC DC Converter Cuk SEPIC Zeta and so forth have been assessed mathematically using state space analysis applied with an aim to enhance power efficiency of renewable energy systems The book Explains various power electronics

converters for different types of renewable energy sources Provides a review of the major power conversion topologies in one book Focuses on experimental analysis rather than simulation work Recommends usage of MATLAB PSCAD and PSIM simulation software for detailed analysis Includes DC DC converters with reasonable peculiar power rating This book is aimed at researchers graduate students in electric power engineering power and industrial electronics and renewable energy
