Representations of the Rotation and Lorentz Groups and Their Applications I. M. Gelfand, R. A. Minlos, Z. Ya. Shapiro, 2018-04-18 This monograph on the description and study of representations of the rotation group of three dimensional space and of the Lorentz group features advanced topics and techniques crucial to many areas of modern theoretical physics Prerequisites include a familiarity with the differential and integral calculus of several variables and the fundamentals of linear algebra Suitable for advanced undergraduate and graduate students in mathematical physics the book is also designed for mathematicians studying the representations of Lie groups for whom it can serve as an introduction to

the general theory of representation The treatment encompasses all the basic material of the theory of representations used in quantum mechanics The two part approach begins with representations of the group of rotations of three dimensional space analyzing the rotation group and its representations The second part covering representations of the Lorentz group includes an exploration of relativistic invariant equations The text concludes with three helpful supplements and a bibliography

Integer Programming and Related Areas C. Kastning, 2013-11-11 Integer Programming is one of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications Since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in 1970 at the Institut für Konometrie und Operations Research University of Bonn Since then many collaborators have contributed to and worked on it Among them Dipl Math Claus Kastning has done the bulk of the work With great perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version For this reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries

Sufficient Reason Daniel W. Bromley, 2010-12-16 In the standard analysis of economic institutions which include social conventions the working rules of an economy and entitlement regimes

property relations economists invoke the same theories they use when analyzing individual behavior In this profoundly innovative book Daniel Bromley challenges these theories arguing instead for volitional pragmatism as a plausible way of thinking about the evolution of economic institutions Economies are always in the process of becoming Here is a theory of how they become Bromley argues that standard economic accounts see institutions as mere constraints on otherwise autonomous individual action Some approaches to institutional economics particularly the new institutional economics suggest that economic institutions emerge spontaneously from the voluntary interaction of economic agents as they go about pursuing their best advantage He suggests that this approach misses the central fact that economic institutions are the explicit and intended result of authoritative agents legislators judges administrative officers heads of states village leaders who volitionally decide upon working rules and entitlement regimes whose very purpose is to induce behaviors and hence plausible outcomes that constitute the sufficient reasons for the institutional arrangements they create Bromley's approach avoids the prescriptive consequentialism of contemporary economics and asks instead that we see these emergent and evolving institutions as the reasons for the individual and aggregate behavior their very adoption anticipates These hoped for outcomes comprise sufficient reasons for new laws judicial decrees and administrative rulings which then become instrumental to the realization of desired individual behaviors and thus aggregate outcomes

Point Processes with a Generalized Order Statistic Property Birgit Debrabant, 2008 Mixed Poisson processes are a well known class of point processes derived from stationary Poisson processes In particular they cover cases where the intensity of a Poisson process is unknown but can be assumed to follow a known probability distribution This situation is common e g in insurance mathematics where for instance the number of accident claims in which an individual is involved and which is evolving over some time can in principal be well described by a Poisson process with an individual yet normally unknown intensity corresponding to the individual's accident proneness Modelling this intensity as a random variable naturally leads to a mixed model Usually an insurance company will have a good estimate of the associated mixing distribution due to its large portfolio of policies
